description About This Manual

This manual is the complete operating reference for the **Public Market Rental Monitoring System (PMRMS)** installed at the Market Office of the Municipality of Tanauan, Leyte. It documents every screen, every field and every business rule the system enforces, so that any officer assigned to the Market Office can run the market’s records without prior training.

groups **Who this manual is for**

- **Market Supervisor** — approvals, officer board, verification slips
- **Market Collector** — rent collection, utility billing, receipts
- **Market Inspector** — stall inspections, violations, logbook
- **Records Officer** — tenant and applicant records, backups

route **How to find what you need**

- **New to the system?** Read Part I in full (Chapters 1–2).
- **Daily counter work?** Chapters 5 and 7 cover rent and billing.
- **Need a rule or figure?** Go straight to Appendix A.
- **Something is wrong?** Appendix B lists fixes by symptom.

| Conventions used in this document

CONVENTION	MEANING
	Text in this style is a button, menu item or on-screen control you click.
Monthly Rent	Bold text names a data field you type into, or a term defined in Appendix C.
	Icons shown inline are the exact icons that appear on screen in the application.
	Coloured pills are status badges reproduced from the application. See Appendix D.
<i>Figure 7.2</i>	Numbered diagrams. The first number is the chapter, the second the figure order.

| Signal boxes

info **Note** — background information or a behaviour of the system that is easy to miss.

lightbulb **Tip** — a faster or safer way to complete the task at hand.

warning **Caution** — an action that changes records in a way you should verify before confirming.

error **Warning** — an action that destroys or overwrites data, or that the system will refuse to perform.

| Document control

VERSION	DATE	PREPARED BY	SUMMARY OF CHANGE
1.0	August 2026	System Development Team	First controlled release. Covers all fifteen modules, the four appendices and the seeded 2026 stall register.

shield **Controlled document.** This manual describes an internal municipal records system. Distribution is limited to Market Office personnel and the offices named in Chapter 12. Record any local amendment in the table above before reissuing.

E	Contacts & Document Sign-off

bolt THE FIVE THINGS AN OFFICER DOES MOST

Collect rent	Tenant Records → tick the month checkbox — \$5.3	Issue a utility bill	Utility Billing → Bill Calculator — \$7.2
Print receipts	Utility Billing → select rows → Print — \$7.5	Approve an applicant	Applicants → Approve → Assign Stall — \$6.3
Issue a verification slip	Stall Management → Verification — \$13.2	Back up the database	Support → Download Full Backup — \$15.1

PART I

Getting Started

What the system is for, where your data lives, and how to move around the application.

info

CHAPTER 1

Introduction & System Overview

The purpose of the system, the records it keeps, and what you need to run it.

1.1 What the system does

The **Public Market Rental Monitoring System (PMRMS)** is a desktop application built for the **Market Office of the Municipality of Tanauan, Leyte**. It is the single official record of everything that happens in the Tanauan Public Market: which stalls exist, who occupies them, what rent and utilities they owe, what they have paid, which applications are waiting, which citations are open, and who authorised each of those entries.

Every figure the Market Office reports upward — occupancy, collection efficiency, arrears, compliance — is computed by the system from these records. Nothing is re-keyed into a separate spreadsheet, and no total is typed by hand.

cloud_off

Fully offline. The application makes no network requests at all. Fonts, icons, the optional language model and all of your data live on the workstation. It works during a brownout on a laptop battery, and it works with the LAN cable pulled out.

1.2 From ledger book to database

TASK	ON PAPER	IN PMRMS
Finding a tenant	Leaf through the stall ledger by section.	Type any part of the name, stall ID or stallkeeper into the search bar.
Rent discount	Compute 20% by hand and hope the arithmetic holds.	Computed on the tick, stored as a separate discount figure (\$5.4).
Utility bill	Subtract readings, multiply by rate, write the receipt.	Readings in, receipt out — with the previous reading carried forward (\$7.2).
Monthly report	Tally the ledger by hand at month end.	Already compiled; open Analytics and print (Chapter 9).
Who changed this?	Often unanswerable.	Every change writes a timestamped logbook entry (Chapter 10).

1.3 Module map

The system is one application with ten navigable modules plus two utility screens. They are not independent programs — a record created in one appears immediately in the others. Figure 1.1 traces the path a single stallholder takes through the system, from the day they file an application to the month-end report their payments land in.

1.4 How your data is stored

All records are held in a single local data store on the workstation, written automatically every time you make a change. There is no server to connect to, no login queue, and no synchronisation step to remember.

1.5 Key features at a glance

dashboard Dashboard Live occupancy, earnings, collection progress and the last 50 actions.	storefront Stalls Register of all 235 stalls with status, permit and inspection tracking.	groups Tenants Lease terms, stallkeepers, meters and the monthly rent ledger.	person_add Applicants Intake through document checks to approval and stall assignment.
bolt Utility Billing Meter-based electricity and water billing with batch receipts.	gavel Violations Citations, demerit points, resolution and repeat-offender ranking.	analytics Analytics Seven-section executive report for the Mayor and Market Board.	menu_book Logbook Automatic, timestamped audit trail of every recorded action.
forum Assistant Ask in plain language; figures come from the records, not from a model.	account_tree Officers Organisational board and directory of market officials.	fact_check Verification Numbered clearance slips for BPLO permit issuance and renewal.	backup Backup One-click export and restore of the entire database as a file.

1.6 System requirements

Requirement	Specification
Operating system	Windows 10 or later, 64-bit
Memory	4 GB minimum; 8 GB if the AI assistant model is installed
Disk space	~400 MB for the application; data grows a few MB per year
Display	1280 × 720 minimum; 1920 × 1080 recommended
Printer	Any A4-capable printer, portrait orientation
Internet	Not required at any point

folder WHERE THINGS ARE KEPT

Records: %APPDATA%\Tanauan Public Market System

Backups you download: your Downloads folder, as pmrms-backup-YYYY-MM-DD.json

Optional AI model: resources/models beside the application

💡 The system runs happily on the office’s existing desktop. It is the printer that most often needs attention — set it to A4 portrait once and receipts will line up every time (\$2.6).

1.7 Installing and first launch

1 Run the installer

Launch TanauanPublicMarketSystem-Setup-1.0.0.exe and accept the default installation folder. A desktop shortcut and Start Menu entry named Tanauan Public Market System are created. A portable build is also available if the workstation forbids installation.

2 Open the application

The Dashboard appears immediately. There is no account to create and no password prompt — access control is the physical security of the office workstation.

3 Confirm the seeded register

The system ships with the market’s 2026 occupancy survey already loaded: 235 stalls across four sections. Open Stall Management and confirm the count matches the office’s own sheet before you begin entering new records.

4 Set your printer

Print any list once and set the printer to A4, Portrait, default margins, scaling off. Windows remembers this for later print jobs.

5 Take a first backup

Go to Support → Download Full Backup. Keep this untouched file as your known-good starting point.

web CHAPTER 2 Interface & Navigation

Learn these six regions once and every module in Part II reads the same way.

2.1 Application layout

Every screen in the system uses the same two-column frame: a fixed sidebar on the left that never changes, and a content area on the right that swaps as you navigate. A sticky top bar runs across the content area and stays visible while you scroll a long table.

2.2 Sidebar navigation

The sidebar carries the deep royal-blue-to-violet gradient and is divided into three fixed sections. The module you are currently in is highlighted with a warm gold pill ; every other item sits in translucent white.

MODULE	ICON	WHAT IT IS FOR	GO HERE WHEN YOU NEED TO...
Dashboard	dashboard	Command centre and global search	see today's standing, or find any record from one box
Stall Management	storefront	Register of physical stalls	change a stall's status, record an inspection, issue a slip
Tenant Records	groups	Stallholders and the rent ledger	collect rent, edit lease terms, add a stallkeeper
Applicants	person_add	Application pipeline	tick requirements, approve, assign a vacant stall
Utility Billing	bolt	Electricity and water billing	enter meter readings, print or batch-print receipts
Violations	gavel	Citation register	record an offence, resolve a case, check repeat offenders
Analytics	analytics	Executive operations report	prepare the report for the Mayor or the Market Board
Logbook	menu_book	Audit trail and daily ledger	prove what was done, when, and log an inspection by hand
Officers	account_tree	Organisational board	appoint, transfer or retire a market official
Assistant	forum	Offline querying assistant	ask a question instead of building a filter

settings

Settings

System information, record counts, export, import and reset to defaults (Chapter 14).

help

Support

Full backup and restore, the built-in FAQ and developer contacts (Chapter 15).

logout

Log Out

Opens a confirmation dialog. Records are already saved, so nothing is lost.

2.3 Top bar & search

Q

Search stalls by ID, tenant, section...

+ New Log Entry

02:47:11 PM PHT
Wednesday, 26 August 2026

AD

Context search — global on the Dashboard

Quick action — varies by module

PHT clock — ticks every second

Alerts — red dot means action is waiting

Administrator

Figure 2.2 — Top bar anatomy. The clock is Philippine Standard Time and is the timestamp used on every logbook entry, receipt and verification slip issued from this workstation.

2.4 Notifications panel

The bell [notifications](#) carries a red dot whenever something needs an officer’s attention. Notifications are not stored messages — they are recomputed from live records each time you open the panel, so clearing an underlying problem clears the alert.

ALERT	RAISED WHEN	CLEAR IT BY
Overdue Rent	A tenant’s rent for the current period is past the due day and untick	Collecting the rent in Tenant Records (\$5.3)
Unpaid Utilities	An electricity or water bill is unpaid, or past its due date	Marking the bill paid in Utility Billing (\$7.4)
Pending Applicants	An application has all six documents and is awaiting review	Approving or rejecting the application (\$6.3)
Expiring Leases	A tenant is flagged <i>Expiring Soon</i>	Renewing the lease terms on the tenant record
Maintenance	A stall is currently set to <i>Maintenance</i>	Returning the stall to <i>Available</i> once work is done
Open Violations	A citation is still unresolved	Setting the citation to <i>Resolved</i> (\$8.3)

2.5 Patterns you will meet everywhere

filter alt

Filter bars

Every register has one. Filters combine — a section filter and a status filter narrow together. **Clear Filters** resets all of them at once, and always resets the search box too.

edit

“Blank keeps on-record” edit forms

Edit forms open *empty*, with the stored value shown as grey placeholder text (“*On record: Meat & Poultry*”). Only fields you actually type into are changed — so you can never blank a field by accident.

visibility

Record sheets

The eye icon opens a formal, printable record sheet rather than a form. Use it when a tenant or an auditor asks to see the file.

warning

Confirmation dialogs

Anything destructive or hard to reverse asks first, and names the record it is about to change. Read the record name in the dialog, not just the button.

2.6 Printing conventions

Everything the system prints — registers, receipts, verification slips and the operations report — is laid out for **A4 portrait** with the printer’s own margins. Configure this once:

print **PRINTER SETTINGS TO USE**

- **Paper size:** A4 · **Orientation:** Portrait
- **Margins:** Default (or None for receipt tiling)
- **Scale:** 100% — turn *Fit to page* off
- **Background graphics:** On, so seals and status colours print

description **WHAT EACH PRINT JOB PRODUCES**

- **Print List** — the *filtered* table as a formal register sheet
- **Print Receipt** — 1, 2 or 4 copies of one utility bill
- Batch print — up to 4 different receipts tiled per sheet (\$7.5)
- Verification slips — 1, 2 or 4 slips per sheet (\$13.2)

lightbulb **Print what you filtered.** **Print List** prints exactly the rows on screen. Filter to one section, or to *Overdue* only, and the printed register is already the working list your inspector needs — no manual highlighting.

PART II **Core Modules**

The six registers the Market Office works in every day — stalls, tenants, applicants, billing and compliance.

Dashboard **CHAPTER 3**

The first screen after launch: where the market stands this morning, in one page.

The Dashboard answers four questions without a single click: *how full is the market, how much has been collected, what is waiting for an officer, and what happened recently.* Everything on it is recomputed from live records each time it is opened — there is no refresh button because there is nothing to refresh.

Figure 3.1 — Dashboard regions. Figures shown are the seeded 2026 register. Each card and panel carries its own shortcut button, so the Dashboard is a launcher as well as a summary.

3.1 Statistics cards

CARD	PRIMARY VALUE	BREAKDOWN SHOWN BENEATH	SHORTCUT
Total Stalls	Every registered stall	Occupied · Available · Temporarily Closed · Closed · Abandoned · Maintenance	—
Occupancy	Occupied ÷ total, as a percentage	Progress bar filled to the same percentage	—
Active Tenants	Tenant records marked Active	How many leases are flagged <i>Expiring Soon</i>	View Tenants
Pending Applicants	Applications awaiting review	How many are still short of documents	Review Now
Unpaid Utilities	Total pesos outstanding	Count of unpaid bills, and how many are overdue	Utilities

3.2 Market earnings panel

This panel is the month’s financial standing in six figures. Read them top to bottom — each line explains the one below it.

FIGURE	WHAT IT MEANS	info Why collected never equals the roll. Roll – outstanding – discounts = collected. If the three do not reconcile on the printed report, a tenant was almost certainly ticked for the wrong month — check the Rent Month picker (\$5.3).
Monthly Rent Roll	The contracted rent of every active tenant, added up. The ceiling for the month.	
Rent Outstanding	What is still uncollected for the current period.	
Early-Payment Discounts	The 20% given away for on-time settlement — this is why collected sits below the roll.	warning The collection meter turns red as soon as any utility bill is overdue, even if rent collection is running well. Red means “something is past due”, not “collection is behind”.
Rent Collected to Date	Actually received this month, net of discounts.	
Utilities Collected	Electricity and water payments received.	
Total Market Earnings	Rent collected plus utilities collected.	

3.3 Stall occupancy chart

A stacked bar chart breaks the register down by **market section** and colours each bar by stall status. Figure 3.2 reproduces it from the seeded 2026 survey, which is what you will see before any new records are entered.

3.4 Recent activity & global search

history Recent activity feed

The last **50** system operations, newest first. Each row carries a colour-coded action icon, a plain-language description (“Rent collected from Maria Santos for Stall MS-01”) and a relative timestamp (“Just now”, “5 minutes ago”). The full history lives in the Logbook (Chapter 10) — this feed is only the recent tail of it.

search Global search

Typing in the search bar *while on the Dashboard* searches everything at once and returns up to **24** results across **Tenants · Stalls · Applicants · Utility Bills · Violations · Officers**. Results are grouped by type, and clicking one jumps straight to that record in its own module. On any other module the same box filters only that module’s table.

lightbulb

When you do not know where a record lives, go to the Dashboard first and search from there. A stallkeeper’s name, a meter number and a bill ID all resolve from the same box.

Storefront

CHAPTER 4

Stall Management

The register of physical stalls — the foundation every tenant and bill hangs from.

A stall is a physical space in the market. It exists whether or not anyone occupies it, and it keeps its identity when tenants come and go. Tenants, bills and verification slips all point back to a stall, which is why this register is maintained first.

4.1 How stalls are identified

4.2 Stall statuses & lifecycle

A stall carries exactly one of six statuses. Four of them (*Occupied*, *Temporarily Closed*, *Closed*, *Abandoned*) mean the space is **held** and is not offered to applicants; only *Available* puts a stall back on the vacancy list.

4.3 Viewing & filtering stalls

The module opens on five summary tiles, a filter bar and the register table.

235

TOTAL STALLS

156

OCCUPIED

24

AVAILABLE

0

MAINTENANCE

47

TEMP. CLOSED

FILTER	OPTIONS	HEADER BUTTON	DOES
Market Section	All · Meat & Poultry · Fish & Seafood · Vegetables & Fruits · Dry Goods	Clear Filters	Resets every filter and the search box
Status	All · Occupied · Available · Maintenance · Temporarily Closed · Closed · Abandoned	Print List	Prints the filtered table as a register sheet
		Stall / Space Verification	Opens the slip dialog (Chapter 13)

FILTER	OPTIONS	HEADER BUTTON	DOES
Search	Stall ID, occupant name, or section	+ New Stall	Opens the Add Stall form

Register columns

COLUMN	SHOWS
Stall ID	Unique identifier — MS-01, CS-04, FS-22, FV-07, KK-11
Section	One of the four market sections
Tenant Name	The current occupant, or <i>Vacant</i>
Status	AvailableOccupiedMaintenanceTemporarily ClosedClosedAbandoned
Business Permit	With BPNo BPNot Recorded — 141 / 11 / 83 in the seeded register
Last Inspection	Date of the most recent recorded inspection, or — if never inspected
Actions	visibility View details fact_check Issue verification slip delete Delete

info “Not Recorded” is not “No BP”. 83 stalls in the seeded register have never had their permit status entered. Treat these as work to do, not as violations — a stall only earns **No BP** when an officer has actually checked and found none.

4.4 Adding a new stall

- 1

Open the form
Click

+ New Stall

 in the module header.
- 2

Enter the stall particulars
 - Stall ID** — type a specific ID, or leave it blank for automatic assignment
 - Section** — Meat & Poultry, Fish & Seafood, Vegetables & Fruits or Dry Goods
 - Tenant Name** — required only if you set the status to *Occupied*
 - Status** — normally *Available* for a newly built stall
 - Business Permit** — With BP, No BP or Not Recorded
- 3

Save
Click

Save

. The stall is created, a unique ID assigned if you left the field blank, and a logbook entry written automatically.

4.5 Stall details & editing

visibility

 The stall record sheet

The eye icon opens a formal, printable sheet showing:

- Stall particulars** — ID, section, status, permit, last inspection
- Assigned tenant** — name, contact and barangay
- Stallkeeper roster** — everyone authorised to trade there
- Utility summary** — electricity and water meter numbers
- Billing history** — every utility bill raised against this stall

From here you can issue a verification slip or click

Edit Details

.

edit

 Editing

The Edit Stall form follows the “**blank keeps on-record**” pattern (§2.5): every field opens empty with the stored value as placeholder text. Fill only what changes.

- Section, Status, Business Permit**
- Last Inspection** — pick a date, or press

Inspected Today

lock **Linked stall protection.** When a tenant record points at this stall, the tenant name and certain status fields are locked here. Change them in Tenant Records instead, so the two never disagree.

4.6 Releasing & deleting a stall

warning **Releasing.** Setting an occupied stall to *Available* asks for confirmation, then **removes the occupant tenant record** and returns the stall to the vacancy list. Do this only when the lease has genuinely ended — a stall that is merely shut should be *Temporarily Closed* instead.

error **Deleting is refused for occupied stalls.** The system will not delete a stall with an active tenant attached, because the tenant’s rent ledger and bills would be orphaned. Release or reassign the tenant first, then delete.

CHAPTER 5

Tenant Records & Rent

The stallholder directory and the monthly rent ledger — the busiest screen in the office.

Tenant Records is the master directory of stallholders. It holds lease terms, contact details, stallkeeper rosters, utility meter numbers, and the month-by-month rent ledger. Rent is collected here, one tick at a time.

5.1 The tenant register

Total	Active	Expiring	₱	%
TENANTS ON RECORD	CURRENT LEASE HOLDERS	LEASES ENDING SOON	MONTHLY RENT ROLL	RENT COLLECTED

FILTER	OPTIONS AND EFFECT
Section	All sections, or one market section
Status	All · Active · Expiring Soon
Rent Status	All · Paid · Unpaid · Overdue — evaluated against the selected Rent Month
Rent Month	Month-year picker. This is the single most important control on the screen — it decides which month your ticks are recorded against.
Search	Tenant name, stall ID, tenant ID or stallkeeper name

5.2 Adding & editing a tenant

Click + New Tenant. Most tenants arrive automatically from an approved application (§6.3) — use this form for records being entered from the paper register.

FIELD	DESCRIPTION	VALIDATION
Name	Full name of the stallholder	Required
Mobile Number	Contact number for collection reminders	11 digits
Barangay	Barangay of residence	—
Stall ID	Autocomplete from stalls that are actually vacant	Required; must be available
Section	Filled in for you from the chosen stall	Automatic
Monthly Rent	Contracted rent in pesos — the basis for the 20% discount	Required; numeric
Status	Active or Expiring Soon	—
Rent Due Day	Day of the month rent falls due	1–28; defaults to 5
Electricity Meter No.	Meter serving this stall; auto-fills the bill calculator	—
Water Meter No.	As above, for water	—
Stallkeepers	Embedded roster editor — see §5.5	—

5.3 Monthly rent collection

Rent is collected directly in the register. Each row shows a checkbox for the selected **Rent Month**, a status badge, and — while the discount is still available — what the tenant would pay if they settled today.

1 Set the Rent Month first

Use the month picker in the filter bar. Past months can be recorded retroactively and future months paid in advance. **Check this before you tick anything.**

2 Tick the tenant's checkbox

The payment is recorded immediately, stamped with today's date, and the discount — if it applies — is computed and stored.

3 Confirm the row

The badge turns **Paid**. If the discount applied, a **-PX early** tag appears beside it.

lightbulb **Undo is just an untick.** Recorded the wrong tenant or the wrong month? Clear the checkbox and the payment for that month is reversed. Both the tick and the untick are written to the Logbook.

5.4 The 20% early-payment discount

Every tenant has a **Rent Due Day** (1–28, default the 5th). Settle **on or before** that day and 20% comes off the month's rent. Settle after it and the full rent is due, and the row shows **Overdue** until it is collected.

calculate THE RULE, EXACTLY

- Due day is configurable per tenant, **1 to 28**, default **5**.
- Paid **on or before** the due day → 20% off. The due day itself still qualifies.
- Collected amount = **Monthly Rent × 0.80**, rounded to centavos.
- The net collected *and* the discount are both stored permanently.
- Before the due day passes, the register shows **PX if paid today** as an incentive.
- Unpaid rent turns **Overdue** by itself the day after it falls due — nothing has to be run or rolled over.

WORKED EXAMPLE — EARLY SETTLEMENT

Tenant	LOTEYRO, LEEMAR — MS-01
Contracted monthly rent	P1,500.00
Rent due day	5 August 2026
Date ticked by the collector	3 August 2026
Qualifies (3 ≤ 5)	Yes — 20%
Discount P1,500 × 0.20	-P300.00
Collected and receipted	P1,200.00

5.5 Stallkeepers

A stallkeeper is a person authorised to trade at the stall on the tenant's behalf. Each tenant may have several. They are edited inside the Add/Edit Tenant form, and they are searchable — typing a stallkeeper's name in the register finds the tenant they work for.

FIELD	NOTES
Name	Full name as it should appear on the stall record sheet
Relationship	Self · Spouse · Child · Parent · Sibling · Other Relative · Hired Helper
Contact Number	Mobile number

FIELD	NOTES
Barangay	Barangay of residence

5.6 The tenant record sheet

The [visibility](#) icon opens a formal record sheet suitable for printing and for showing to the tenant across the counter:

- Tenant particulars** — name, tenant ID, phone, barangay, assigned stall
 - Stallkeeper information** — the full authorised roster
 - Utility meters** — electricity and water meter numbers
- Rent account** — payment date, discount received, days late if overdue
 - Rent ledger** — up to 12 months of payment history
 - Bill history** — every utility bill raised against this tenant

balance

This sheet settles disputes. When a tenant queries a figure, open the record sheet rather than the edit form: it shows the stored discount, the exact date of settlement, and the days late as the system counted them.

erson_

CHAPTER 6

Applicant Management

From the day a folder is filed to the day a stall key changes hands.

Applicant Management is the intake end of the market. It tracks each application from filing, through the six documentary requirements, to approval or rejection — and then hands the approved applicant straight to the stall assignment form, which creates the tenant record for you.

6.1 The application pipeline

published_with_changes

Automatic status advancement. When the sixth documentary requirement is ticked, the application moves itself from *Incomplete* to *Pending Review* and appears in the notification bell. Untick one and it drops back.

6.2 Documentary requirements

Six documents are required, in this order. The register’s **Requirements** column shows progress as coloured dots with a running count such as [4/6](#) ; hovering a dot names the specific document.

#	REQUIREMENT	WHAT THE OFFICE IS CHECKING FOR
1	Business Permit	A valid permit from the Business Permit & Licensing Office
2	Barangay Clearance	Clearance from the applicant's own barangay
3	Community Tax Certificate (Cedula)	Current year's cedula
4	Health / Sanitary Permit	Health certificate — indispensable for meat, poultry and fish stalls
5	2×2 ID Photo	A recent photograph for the stall record sheet
6	Signed Contract of Lease	The lease executed with the Market Office

check_circle Business Permit

check_circle Barangay Clearance

check_circle Cedula

check_circle Health / Sanitary Permit

check_circle 2×2 ID Photo

check_circle Contract of Lease

sync **Business permits sync both ways.** If an applicant who already holds a stall later submits their Business Permit, the linked stall's permit badge flips from **No BP** to **With BP** on its own. You never have to remember to update the stall register as well.

6.3 Approval & stall assignment

- 1 Open the review form**

Click the applicant's row, or the review action button. Here you can correct the applicant's details and tick or untick each requirement as documents are presented.
- 2 Approve**

With the requirements satisfied, click **Approve**. The **Assign Stall** form opens immediately — approval and assignment are one continuous action.
- 3 Assign a stall**

The form lists only **genuinely vacant** stalls. If the applicant named a preferred stall and it is still free, it is pre-selected for you. Set:

 - **Stall** — from the vacancy list
 - **Monthly Rent** — the contracted amount for this stall
 - **Section** — filled in from the stall

The applicant's name and mobile number carry over automatically.
- 4 Confirm**

Click **Assign & Create Tenant**. In one step the system creates the tenant record, marks the stall *Occupied*, links the applicant record to the new tenant, and writes the logbook entry.

schedule **Approving without assigning.** Click **Skip for now** to approve an applicant while no suitable stall is free. The approval stands and the stall can be assigned later from the same record.

warning **Check the rent before confirming.** The **Monthly Rent** you enter here becomes the basis for every future rent collection and every 20% discount. Correcting it later does not restate months already collected.

CHAPTER 7

Utility Billing

Meter readings in, receipts out — for electricity and water across every stall.

Utility Billing is the meter-reading and billing engine. It computes consumption from two readings, applies the municipal rate, issues a numbered bill, and prints the receipt — one at a time, or four to a sheet for a whole section.

7.1 Rates & the billing formula

UTILITY	RATE	UNIT	LATE SURCHARGE
bolt Electricity	₱11.50	per kWh	3.35%
water_drop Water	₱25.00	per cu.m	10.00%

calculate THE FORMULA

Consumption = Current Reading – Previous Reading
(never below zero)

Amount Due = Consumption × Rate per Unit

Total if late = Amount Due × (1 + surcharge rate)

Figure 7.1 — How a bill is computed. Surcharge is never written into the bill record. It is recalculated whenever the receipt is printed, so a receipt always shows what is owed *today* while the ledger keeps what was originally billed.

7.2 Issuing a bill, step by step

- 1 Choose the utility**

Toggle **Electricity** or **Water**. The rate, the unit label (kWh or cu.m) and the icon all change with it.
- 2 Choose the stall or the tenant**

Pick a stall and the occupant, last recorded reading and meter number fill themselves in. Picking a tenant instead selects their stall.
- 3 Set the period covered**

Enter **Period From** and **Period To**, or press **Cover all of [Month]** to snap to the first and last day of the current month.
- 4 Set the due date**

Defaults to **15 days after** the period end. Adjust it if the office is billing on a different cycle.
- 5 Enter the readings**

Previous Reading is carried forward from the last bill on record. Type the **Current Reading**. The system rejects negative readings and warns if the current reading is below the previous one.
- 6 Check the live summary**

A summary card shows stall, tenant, meter number, period, both readings, consumption, rate and amount due — and warns you with the computed surcharge if the due date has already passed.
- 7 Save or print**

 - Save to Records** — posts the bill, writes the logbook entry, and records the meter number against the stall if it was not already stored
 - Print Receipt** — opens the print preview straight away
 - Clear** — empties the calculator without saving

content_copy Duplicate detection. If a bill already exists for the same stall, utility and billing period, the system stops and asks whether you meant to issue a second one. This catches the most common billing error — the same section read twice in a month.

7.3 Worked examples

bolt ELECTRICITY — PAID ON TIME	
Stall / meter	FV-07 · EM-4412
Period covered	1–31 August 2026
Previous reading	1,162 kWh
Current reading	1,248 kWh
Consumption	86 kWh
Rate	₱11.50 / kWh
Due date	15 September 2026
Amount due	₱989.00

water_drop WATER — PRINTED AFTER THE DUE DATE	
Stall / meter	FS-22 · WM-0188
Period covered	1–31 July 2026
Previous / current	318 → 336 cu.m
Consumption	18 cu.m
Rate	₱25.00 / cu.m
Amount billed (ledger)	₱450.00
Late surcharge 10.00%	+₱45.00
Payable on the receipt	₱495.00

7.4 Billing records & management

Below the calculator sits the register of every bill ever issued, filtered by **Utility Type** (Electricity / Water), **Status** (Unpaid / Paid / Overdue) and a free-text **Search** across bill ID, stall number, tenant name and meter number.

COLUMN	SHOWS
Select	Checkbox for batch printing. The header checkbox selects every visible row.
Bill ID	Sequential identifier, e.g. <code>UTL-001</code> — never reused
Utility / Stall / Meter	What was billed, where, and off which meter
Tenant	Who was billed
Period	The billing period covered
Consumption	kWh or cu.m computed from the readings
Amount	The billed figure — never altered by surcharge
Status	Paid Unpaid Overdue — overdue is derived from the due date, not set by hand
Actions	visibility View task_alt Mark paid / unpaid print Print delete Delete

Use Export CSV to take the filtered register into a spreadsheet. The export carries the full detail — both readings, the rate, the surcharge percentage, the surcharge as of today and the total payable today — not just what is on screen.

7.5 Receipts & batch printing

print Printing one bill

The print icon opens the print preview:

- **Copies:** 1, 2 (*Tenant's Copy + Market Office Copy*) or 4 (adding *Treasurer's Copy + File Copy*)
- **Zoom:** slider from 35% to 200%, plus Fit and Actual Size (100%)
- **Fullscreen:** for checking small print — press Esc to leave

edit_note “Printed by”

The issuing officer’s name is remembered from the last print, so it is typed once a shift rather than once a bill.

grid_view Batch printing a section

- 1

Select the bills
Tick individual rows, or use the header checkbox to take every row currently visible after filtering.
- 2

Read the batch bar
A floating bar reports “X bills selected · Y A4 sheets, 4 receipts to a sheet”.
- 3

Print
Click Print X Receipts. Four *different* stalls’ receipts are tiled 2×2 per sheet with dotted cut guides.

#	VIOLATION ISSUE
2	Improper stall cleanup
3	Health code violation
4	Unpaid rent or utilities

#	VIOLATION ISSUE
6	Unauthorized subleasing
7	Fire safety non-compliance
8	Obstruction of walkway

8.3 Recording & resolving a citation

- 1 Click [+ Record Violation](#)

Opens the citation form.
- 2 Fill in the citation

 - **Party Cited** — pick from the tenant list, or type any name for a non-tenant
 - **Demerit Points** — the severity, as a number
 - **Violation Issue** — one of the eight standard issues, or your own wording
 - **Status** — Open, or Resolved if it was settled on the spot
 - **Date Recorded / Date Resolved**
 - **Officer Notes** — free text; this is where the account of what happened belongs
- 3 Save

The citation is recorded and a logbook entry written.

[task_alt](#) **Resolving**

Open **Edit Violation** and set the status to **Resolved**. The resolution date is stamped for you. Reopening a case clears that date again. Demerit points and notes can be amended at any time.

[sort](#) **Sorting & export**

The register lists open cases first, then newest recorded date.

[Export CSV](#) downloads every citation; [Print List](#) prints the filtered table for the inspector's rounds.

lightbulb **Write the notes as if for a hearing.** Officer Notes are the only free-text account of the offence. Record what was seen, when, and who was present — the badge and the points will not carry a case on their own.

PART III

Reporting & Intelligence

Turning the day's records into the report the Mayor reads and the trail an auditor follows.

CHAPTER 9

Analytics & Operations Report

A formal seven-section report for the Municipal Mayor and the Market Board.

The Analytics module compiles a complete **executive operations report** from live records. It is not a dashboard with charts bolted on — it is a document, laid out for printing, with a masthead, a reference number and seven numbered sections in the order a board expects to read them.

REPORT MASTHEAD			
Seal	The Tanauan municipal seal, top left	Reference	PMRMS-AR-YYYYMMDD , generated from the date
Title	Public Market Operations Report	Timestamp	Date and time of generation, Philippine Standard Time

9.1 Anatomy of the report

**PUBLIC MARKET OPERATIONS REPORT**
Municipality of Tanauan, Leyte · Market Office

PMRMS-AR-20260826
generated 26 Aug 2026, 02:47 PM PHT

I	Executive Summary	Headline cards with progress meters — occupancy, tenancies, applications, collection efficiency, open violations
II	Stall Utilization	Stacked bar chart by section and status, plus a status table with counts and proportion bars
III	Applicant Processing	Pipeline by status — pending, incomplete, no permit, approved, rejected — with filing shares
IV	Tenancy & Rental Coverage	By section: total stalls, occupied, tenants, monthly rent roll, section occupancy percentage
V	Utility Billing & Collection	Consumption chart plus collection standing — billed, collected and outstanding for each utility
VI	Compliance & Violations	Summary metrics and a table of recent citations with status badges
VII	Logbook Activity	Operational logs broken down by type and share of all logbook entries

Figure 9.1 — The seven sections. Sections I–IV answer “is the market full and are the leases sound”; V answers “is the money coming in”; VI–VII answer “is the place compliant and is the office keeping its records”.

9.2 Reading each section

summarize I • Executive Summary

Five headline cards, each with a progress meter: **Stall Occupancy Rate**, **Active Tenancies**, **Applications Pending**, **Collection Efficiency Rate**, and **Open Violations & Demerit Points**. If the board reads one page, this is it.

bar_chart II • Stall Utilization

The same stacked chart as Figure 3.2, backed by a table giving exact counts per status with proportion bars. Use this to justify a request for stall rehabilitation.

how_to_reg III • Applicant Processing

Shows where applications are getting stuck. A large *Incomplete* share is a documentation problem; a large *Pending Review* share is an officer-time problem.

apartment IV • Tenancy & Rental Coverage

Section-by-section occupancy and monthly rent roll. This is the section that shows which part of the market is carrying the revenue.

payments V • Utility Billing & Collection

Electricity and water consumption, amounts billed, amounts collected and the outstanding balance. Collection efficiency in section I is derived from these figures.

gavel VI–VII • Compliance & Activity

Recent citations with their status, then a breakdown of logbook entries by type — evidence that inspections and collections are actually being recorded, not just performed.

9.3 Exporting & presenting

Export Report downloads a complete JSON file (`civic-market-core-report.json`) holding every figure behind the report. Use it to archive the month, to hand data to another office, or to build a chart the report does not include.

To present the report, print it directly (§2.6). Because it is laid out as a document, the printed output needs no reformatting.

bolt **The report is always live.** There is no “generate” step and no stored version. Opening Analytics recompiles it from current records, so the reference number is the date you opened it — print or export on the day the board meets.

warning Because it is live, a report printed before month-end collection differs from one printed after. Note the timestamp in the masthead when you file a copy.

**CHAPTER 10**
Logbook (Audit Trail)

The record of what was done, by which module, and when — written mostly without you.

The Logbook is both the daily activity ledger and the audit trail. Officers write inspections, incidents and announcements into it by hand; the system writes everything else into it automatically.

10.1 Log types

TYPE	COLOUR	USED FOR	TYPICAL SOURCE
Inspection	Blue	Stall inspections and permit checks	Mostly entered by hand by the Market Inspector
Incident	Red	Security incidents, complaints, disturbances	Entered by hand
Maintenance	Amber	Repairs, cleaning, facility works	Entered by hand, or written when a stall moves to <i>Maintenance</i>
Collection	Green	Rent and utility collections	Written automatically on every rent tick and bill payment
Announcement	Gray	Public notices, schedule changes, advisories	Entered by hand

10.2 What the system logs by itself

Every record-changing action writes a structured, timestamped entry. You never have to remember to log these:

- Adding, editing or deleting a stall
- Creating, editing or releasing a tenant
- Ticking or unticking a month’s rent
- Approving or rejecting an applicant
- Assigning a stall to an approved applicant
- Issuing, editing, paying or deleting a utility bill
- Recording, amending or resolving a violation
- Appointing, transferring or removing an officer
- Issuing a stall / space verification slip
- Importing, exporting or resetting the database

history **Rent entries name the figures.** A collection entry records the tenant, the stall, the month, the amount collected and — where it applied — the 20% discount and the date it was settled on. That single line is usually enough to answer a query without opening the tenant record.

10.3 Manual entries, filtering & export

add Adding an entry by hand

- 1

Click + New Entry
Available in the Logbook, and as a quick action on the Dashboard top bar.
- 2

Choose type and write the detail
Pick Inspection, Incident, Maintenance, Collection or Announcement, then describe what happened.
- 3

Save
Stamped with the current Philippine Standard Time and added to the ledger.

filter_alt Finding and exporting

- **Date filter** — entries recorded on a chosen date
- **Type filter** — one of the five log types
- **Search** — matches both the detail text and the type
- **Export Log** — all entries as CSV
- **Print List** — the filtered entries as a register sheet

error **Deleting a log entry breaks the trail.** The system warns you because the Logbook is the office’s audit record. Delete only a genuine mis-entry, and record why in a replacement entry.

CHAPTER 11

Market Assistant

Ask a question in plain language. The figures still come from the records.

The Market Assistant lets an officer ask about rent, stalls, bills, tenants and violations without building a filter. It runs entirely on the workstation — there is no online service behind it.

11.1 How the two-tier engine works

verified **Data accuracy guarantee.** Amounts, counts and names are always produced by the system’s own business logic — never generated by a language model. If the model’s phrasing disagrees with the computed facts on any figure, the phrasing is discarded and the verified record text is shown instead.

11.2 What you can ask

INTENT	ASK IT LIKE THIS	ANSWERS WITH
Overdue rent	“Who has overdue rent?” · “List overdue tenants”	Named tenants, stalls and days late
Unpaid rent	“Who hasn’t paid rent this month?”	Uncollected tenants for the current period
Collected rent	“How much rent has been collected?”	Total collected, net of discounts
Tenant payment	“Has Maria Santos paid her rent?”	That tenant’s standing for the period
Total earnings	“What are total market earnings?”	Rent plus utilities collected
Vacant stalls	“Which stalls are available?”	Genuinely vacant stalls by section
Stall status	“What’s the occupancy breakdown?”	Counts per status across the register
Unpaid utilities	“Are there unpaid electricity bills?”	Outstanding bills and their total
Meter lookup	“What’s the meter number for Stall MS-01?”	Electricity and water meter numbers
Tenant lookup	“Show me details for Juan Dela Cruz”	The tenant’s particulars and standing
Pending applicants	“How many pending applications?”	Count and who is waiting
Open violations	“Any open violations?”	Unresolved citations and demerit points

11.3 Reading an answer

label Source badges

Every answer states where its wording came from:

- From the records** — computed directly from the database
- Worded by model · figures verified** — the model phrased it, and every figure passed the check
- Model wording discarded** — the phrasing failed the check; you are seeing the raw record text

All three are equally trustworthy on the numbers. The badge tells you about the *prose*, not the data.

touch_app Working with the assistant

- Suggestion chips** — one tap for the questions asked most often
- Composer bar** — type any question in natural language
- Navigation buttons** — answers offer **Open Tenants**, **Open Billing** and similar, so you can act on what you just read
- Model status** — the header badge shows **neurology** a model is active, or **database** records-only mode

info Records-only mode is not a degraded mode. Every one of the twelve intents above is answered identically without a model.

PART IV

Administration

The people who run the market, the slips that prove a stall is theirs, and the controls that keep the data safe.

CHAPTER 12

Officers & Organizational Board

The municipal seats that govern the market, rendered as a board the Mayor can read at a glance.

The Officers module maintains the **organizational chart** of the market’s governing structure. It does not control login access — the system has no sign-in — it records *who holds which post*, so that verification slips carry the right name and the board of officers is always current for an inspection or an audit.

12.1 The board at a glance

10

SEATS ON THE BOARD

8

MUNICIPAL OFFICES

3

STATUS LEVELS

∞

REPORTING DEPTH

OFC-

ID PREFIX

The system ships with ten pre-configured seats that mirror the Tanauan market governance structure. New seats can be added at any time; existing seats are never truly deleted — they revert to **Vacant**.

account_tree **SEEDED OFFICER SEATS**

ID	POSITION	OFFICE	REPORTS TO
OFC-001	Municipal Mayor	Office of the Municipal Mayor	— (head of board)
OFC-002	Market Board Chairperson	Market Board	OFC-001
OFC-003	Market Supervisor	Market Office	OFC-001
OFC-004	Assistant Market Supervisor	Market Office	OFC-003
OFC-005	Market Collector	Market Office	OFC-003
OFC-006	Market Inspector	Market Office	OFC-003
OFC-007	Records Officer	Market Office	OFC-003
OFC-008	Sanitary Inspector	Municipal Health Office	OFC-003
OFC-009	Licensing Officer	Business Permit & Licensing Office	OFC-001
OFC-010	Market Treasurer / Cashier	Municipal Treasurer’s Office	OFC-001

12.2 Board view & directory view

account_tree **Organizational Board**

An interactive **tree diagram** starting from the root (Mayor). Each card shows the appointee’s initials, name, position, office unit, and status badge. Vacant seats display a dash instead of initials and read “Vacant seat”. Click any card to view or edit the seat.

- Child nodes are indented with tree-line connectors
- The tree expands to any depth — there is no hard limit on reporting layers
- On Leave** badges are shown inline

table_rows **Directory (Table) View**

A flat, paginated table with columns for **Officer** (avatar, name, position), **Office**, **Reports To**, **Contact**, **Appointed**, **Status**, and **Actions** (View, Edit, Delete).

- Filter by office unit dropdown
- Full-text search across name, position, and office
- Export CSV** downloads **market-office-board.csv**
- Print List** prints the filtered directory as a register sheet

12.3 Adding & editing officers

person_add The officer form

FIELD	NOTES
Name	Full name of the appointee. Leave blank for a vacant seat — the status toggles to <i>Vacant</i> automatically.
Position *	Official title, e.g. Market Supervisor.
Office *	Selected from the eight municipal units.
Reports To	Tree-indented dropdown of all other seats. The system prevents circular references: you cannot select yourself or any of your own subordinates.
Phone	11-digit mobile number, formatted automatically.
Email	Contact email address.
Status	Active On Leave Vacant
Date Appointed	Date picker, recorded as ISO YYYY-MM-DD.

security Integrity rules

info

No circular chains. If Officer A reports to B, and B reports to C, you cannot set C to report to A. The dropdown disables every seat that would create a loop.

warning

Deleting lifts subordinates. When you delete a seat, every officer who reported to it is automatically reassigned to the deleted seat's own superior. The chain is never broken.

info

Dangling superiors are repaired on load. If a backup references a superior ID that no longer exists, the seat is lifted to the board root on the next open.

check_circle Office of the Municipal Mayorcheck_circle Market Officecheck_circle Market Boardcheck_circle Municipal Treasurer's Officecheck_circle Business Permit & Licensing Officecheck_circle Municipal Health Officecheck_circle Municipal Engineering Officecheck_circle Sangguniang Bayan

receipt

CHAPTER 13

Verification Slips

The receipt a tenant holds up to prove they paid, and the register the office files.

The system produces two kinds of printable output that serve as verification: **utility billing receipts** (the slip a tenant keeps) and **register sheets** (the list the office files). Both are laid out for A4 paper and print directly from the browser.

13.1 When a slip is issued

receipt Billing receipt

Issued when a utility bill (electricity or water) is computed and the officer prints it. A receipt is a **quarter of an A4 sheet**, so four receipts tile onto one page. A single bill can be printed in up to four labelled copies:

- Tenant's Copy
- Market Office Copy
- Treasurer's Copy
- File Copy

list_alt Register sheet

Available from every list page (stalls, tenants, applicants, billing, violations, logbook, officers). Prints the **current filtered view** as a numbered table with the municipal seal, a title, the active filters, and a timestamp. A "Checked by" sign-off line is printed at the bottom.

13.2 Issuing a slip

1 Compute or select the bill

In Utility Billing, either use the Bill Calculator (\$7.2) to compute a new bill, or select an existing bill from Billing Records.

2 Click **Print**

Opens the Print Preview dialog. A full-size preview of the sheet appears, exactly as it will print.

3 Enter “Printed By”

The name of the officer issuing the receipt. This is remembered for the next print so you only type it once per shift.

4 Choose copies

For a single bill: 1 copy (tenant only), 2 copies (tenant + office), or 4 copies (fill the sheet). For a batch: one receipt per bill, tiled four to a page.

5 Review and print

Verify the preview, then click **Print**. The browser’s print dialog opens with the sheet ready to send to the printer.

info **Unsaved bills print without a bill number.** If you print a bill that has not been saved to records yet, it prints with “Not yet on record” where the bill number would be. Save the bill first if the tenant needs the reference number.

13.3 Anatomy of a printed slip

Figure 13.1 — Receipt anatomy. Each receipt is one quarter of an A4 sheet. Cut along the guides to separate copies. The masthead, reference, and tenant block together identify the charge; the consumption block shows how the figure was calculated.

lightbulb **Late surcharges print automatically.** If a bill is both unpaid and past its due date, the receipt adds a surcharge section showing the applicable percentage (3.35% for electricity, 10% for water), the surcharge amount, and the revised total due. No officer action is needed — the surcharge is computed at the moment of printing.

CHAPTER 14
Settings & Data Management

System information, record counts, and the three actions that move or destroy the database.

Settings is a read-and-act page: it shows the system’s vital signs and offers three data management actions. There are no toggles or preferences to configure — every business rule in the system is fixed by ordinance and enforced in code.

14.1 System information

info Identity panel

FIELD	SHOWS
Application	Tanauan Public Market v1.0
Storage	Local Browser Storage
Total Records	Sum of stalls + tenants + applicants + bills + violations + logs
Last Saved	Philippine Standard Time timestamp of the last write to storage

monitoring Quick stats

COUNTER	SOURCE
Total Stalls	Stall register count
Active Tenants	Tenants with status <i>Active</i>
Pending Applicants	Applications in <i>Pending Review</i>
Utility Bills Issued	Total bills on record
Open Violations	Citations with status <i>Open</i>
Unpaid Utilities	Peso total of all unpaid bills

14.2 Export, import & reset

download Export All Data

Downloads

civic-market-core-report.json

containing every record on this workstation: stalls, tenants, applicants, utility bills, violations, logbook entries, officer seats, and a generation timestamp. Use it to **archive the month**, hand data to another office, or move records to a second workstation.

upload Import Data

Reads a JSON file previously exported from this system. Before anything is overwritten, a confirmation dialog shows the incoming record counts compared to what is currently held. **Importing replaces everything.** Export the current data first if it has not been filed elsewhere.

delete_forever Reset to Defaults

Erases every record and returns the system to its factory state: the seeded stall register, the ten officer seats, and empty tenant, billing, and logbook tables. A confirmation dialog names the action and warns that it cannot be undone.

error Reset is irreversible. The system clears **localStorage** and resets all sequential ID counters (APP-, TEN-, STL-, OFC-, VIO-, LOG-, BILL-). Any data not previously exported is permanently lost.

lightbulb End-of-month routine. Before closing the books, open Settings and click **Export All Data**. File the download in a folder named for the month. If anything goes wrong, you can import it back.

help **CHAPTER 15**

Support & Help Center

Backup and restore, the FAQ, and a direct line to the development team.

The Support page is the officer’s first stop when something needs explaining. It groups four information cards, a contact directory, the backup facility, and an accordion FAQ.

15.1 Backup & restore

cloud_download Download Full Backup

- 1 Open Support**

The backup panel shows the current record breakdown: stalls, tenants, applicants, utility bills, violations, and logbook entries.
- 2 Click Download Full Backup**

The system writes a file named **pmmrs-backup-YYYY-MM-DD.json** containing the complete application snapshot.

cloud_upload Upload Backup

- 1 Click Upload Backup File**

A file picker opens. Select a **.json** backup previously downloaded from this system.
- 2 The system validates the file**

It checks for the required record keys (applicants, tenants, stalls, logs, activities). If any are missing, an error message appears and nothing is changed.

3 File the download

Copy the file to a USB drive, a shared folder, or any safe location. This is your recovery point.

3 Data is restored immediately

A green **Data restored successfully** banner confirms the operation. All records are replaced with the backup contents.

warning Restoring **replaces all current data**. Export the present state first if it contains anything not already saved elsewhere.

15.2 Built-in FAQ & contacts

quiz Frequently Asked Questions

An accordion with eleven operational questions and answers, covering:

- Adding stalls, managing applicants, recording requirements
- Computing and locating utility bills
- Recording and resolving violations
- Viewing analytics and exporting reports
- Where data is stored (locally, not on a server)
- Moving records between computers
- Backup and restoration steps

Click any question to expand its answer; click again to collapse it.

contact_phone Contact directory

Three development team contacts are displayed with avatar badges, email links, and phone numbers:

NAME	EMAIL	PHONE
Jon Jon Albao	jonjonalbao65@gmail.com	+63 919 845 1397
Kyra Joyce Tondo	kyrajocet@gmail.com	+63 916 425 8038
Shila Mae Marteja	shilamaemarteja18@gmail.com	+63 985 452 8964

info The four information cards at the top of the Support page — **User Guide**, **Contact Support**, **System Updates**, and **Data Privacy** — summarise the system’s current state. The Data Privacy card confirms: “All data is stored locally. No information is transmitted to external servers.”

APPENDICES

Reference Tables

Business rules, troubleshooting, data dictionary, badge glossary, and the document sign-off.

rule

APPENDIX A

Business Rules Quick Reference

Every formula and threshold the system enforces, on one page.

RULE	FORMULA / VALUE	REFERENCE
Early-payment rent discount	20% off monthly rent if paid on or before the tenant’s due day	\$5.4
Rent due day	Day 1–28 of each month, set per tenant (clamped to 28 to avoid February problems)	\$5.3
Overdue rent	Unpaid status becomes Overdue once the due day of the current month has passed	\$5.3
Electricity billing	(Current – Previous) × Rate + Fixed Charge	\$7.1
Water billing	(Current – Previous) × Rate + Fixed Charge	\$7.1
Default electricity rate	₱14.50 / kWh + ₱100.00 fixed charge	\$7.1
Default water rate	₱25.00 / cu.m + ₱50.00 fixed charge	\$7.1
Electricity late surcharge	3.35% of bill amount, applied when unpaid past due date	\$7.6

RULE	FORMULA / VALUE	REFERENCE
Water late surcharge	10.0% of bill amount, applied when unpaid past due date	\$7.6
Bill due date default	15 days after the last day of the billing period	\$7.2
Receipts per sheet	4 receipts per A4 page (2 × 2 grid)	\$13.2
Stall statuses	Occupied · Available · Maintenance · Temporarily Closed · Closed · Abandoned	\$4.2
Applicant statuses	Pending Review · Incomplete · No BP · Approved · Rejected	\$6.1
Violation points	Configurable per citation; tracked cumulatively per tenant	\$8.1
Items per page	10 rows in every paginated list	\$2.5
Officer ID circular link prevention	A seat cannot report to itself or to any of its own subordinates	\$12.3
Data storage	Browser <code>localStorage</code> under key <code>pmrms-storage</code>	\$14.1
Timezone	All timestamps in Philippine Standard Time (UTC+8)	\$1.4

APPENDIX B

Troubleshooting by Symptom

When something looks wrong, find the symptom here.

SYMPTOM	LIKELY CAUSE	FIX
All data is gone after reopening	Browser storage was cleared (cache wipe, privacy mode, or a different browser)	Import the last backup from Support → Upload Backup. Always use the same browser.
Rent shows “Overdue” for a tenant who paid	The payment was recorded under a different period, or the month checkbox was not ticked	Open Tenant Records, find the tenant, and tick the correct month’s checkbox.
Cannot assign a stall to an approved applicant	The stall’s status is not “Available”	Change the stall to Available in Stall Management before assigning.
Utility bill shows ₱0.00	Previous and current readings are the same, or the rate is zero	Check the meter readings and the rate in the Bill Calculator.
Import fails with an error	The file is not a valid export from this system, or it is corrupted	Use only <code>.json</code> files produced by Export All Data or Download Full Backup.
Print preview is blank	No bills are selected, or no records match the current filter	Clear filters or select at least one bill before printing.
Officer tree shows a seat at root level unexpectedly	Its superior was deleted and the seat was lifted to root automatically	Edit the seat and select a new superior from the dropdown.
Application status does not change after ticking requirements	The application was already Approved or Rejected — manual decisions override the checklist	This is by design. Only Pending Review and Incomplete respond to the checklist automatically.
Search returns no results	Search matches ID, name, and primary fields only — it does not search inside notes	Check that the search term matches a name, stall ID, or record number.
Late surcharge does not appear on the receipt	The bill is either already paid, or the due date has not yet passed	Surcharges compute dynamically. They appear only when the bill is unpaid <i>and</i> past due.
“Could not save to browser storage” toast	<code>localStorage</code> is full (typically 5–10 MB limit)	Export a backup, clear old data, or use a browser with a larger storage quota.

APPENDIX C

What every record type holds, and how its identifier is built.

Data Dictionary & ID Prefixes

C.1 ID prefixes

PREFIX	ENTITY	EXAMPLE	NOTES
STL-	Stall	STL-001	Also uses section-based IDs like MS-01, FS-40, DS-12, GMS-05
TEN-	Tenant	TEN-001	Sequential, never reused
APP-	Applicant	APP-001	Sequential, never reused
BILL-	Utility Bill	BILL-0001	4-digit zero-padded
VIO-	Violation	VIO-001	Sequential, never reused
LOG-	Logbook Entry	LOG-001	Sequential, never reused

D.2 Logbook entry colours

TYPE	COLOUR	ICON	USAGE
Inspection	Blue	search	Stall inspections and permit checks
Incident	Red	warning	Security incidents, complaints, disturbances
Maintenance	Amber	build	Repairs, cleaning, facility works
Collection	Green	payments	Rent and utility collection records
Announcement	Gray	campaign	Notices, schedule changes, advisories

D.3 Assistant source indicators

BADGE	MEANING
From the records	Answer was computed and worded directly from the database. No model was involved.
Worded by model · figures verified	A local language model rephrased the answer. Every number and name passed the verification gate.
Model wording discarded	The model's phrasing contained a figure or name not in the computed facts, so it was thrown away and the raw answer shown instead.

signature
