OFFLINE OPERATION

About This Manual

This manual is the complete operating reference for the **Public Market Rental Monitoring System (PMRMS)** installed at the Market Office of the Municipality of Tanauan, Leyte. It documents every screen, every field and every business rule the system enforces, so that any officer assigned to the Market Office can run the market’s records without prior training.

Who this manual is for

- Market Supervisor** — approvals, officer board, verification slips
- Market Collector** — rent collection, utility billing, receipts
- Market Inspector** — stall inspections, violations, logbook
- Records Officer** — tenant and applicant records, backups

How to find what you need

- New to the system?** Read Part I in full (Chapters 1–2).
- Daily counter work?** Chapters 5 and 7 cover rent and billing.
- Need a rule or figure?** Go straight to Appendix A.
- Something is wrong?** Appendix B lists fixes by symptom.

Conventions used in this document

CONVENTION	MEANING
Save to Records	Text in this style is a button, menu item or on-screen control you click.
Monthly Rent	Bold text names a data field you type into, or a term defined in Appendix C.
icon	Icons shown inline are the exact icons that appear on screen in the application.
Paid Unpaid	Coloured pills are status badges reproduced from the application. See Appendix D.
Figure 7.2	Numbered diagrams. The first number is the chapter, the second the figure order.

Signal boxes

Note — background information or a behaviour of the system that is easy to miss.

Tip — a faster or safer way to complete the task at hand.

Caution — an action that changes records in a way you should verify before confirming.

Warning — an action that destroys or overwrites data, or that the system will refuse to perform.

Document control

VERSION	DATE	PREPARED BY	SUMMARY OF CHANGE
1.0	August 2026	System Development Team	First controlled release. Covers all fifteen modules, the four appendices and the seeded 2026 stall register.

Controlled document. This manual describes an internal municipal records system. Distribution is limited to Market Office personnel and the offices named in Chapter 12. Record any local amendment in the table above before reissuing.

Table of Contents

PART I — GETTING STARTED

1 Introduction & System Overview

- 1.1 What the system does
- 1.2 From ledger book to database
- 1.3 Module map
- 1.4 How your data is stored
- 1.5 Key features at a glance
- 1.6 System requirements
- 1.7 Installing and first launch

2 Interface & Navigation

- 2.1 Application layout
- 2.2 Sidebar navigation
- 2.3 Top bar & search
- 2.4 Notifications panel
- 2.5 Patterns you will meet everywhere
- 2.6 Printing conventions

PART II — CORE MODULES

3 Dashboard

- 3.1 Statistics cards
- 3.2 Market earnings panel
- 3.3 Stall occupancy chart
- 3.4 Recent activity & global search

4 Stall Management

- 4.1 How stalls are identified
- 4.2 Stall statuses & lifecycle
- 4.3 Viewing & filtering stalls
- 4.4 Adding a new stall
- 4.5 Stall details & editing
- 4.6 Releasing & deleting a stall

5 Tenant Records & Rent

- 5.1 The tenant register
- 5.2 Adding & editing a tenant
- 5.3 Monthly rent collection
- 5.4 The 20% early-payment discount
- 5.5 Stallkeepers
- 5.6 The tenant record sheet

6 Applicant Management

- 6.1 The application pipeline
- 6.2 Documentary requirements
- 6.3 Approval & stall assignment

7 Utility Billing

- 7.1 Rates & the billing formula
- 7.2 Issuing a bill, step by step
- 7.3 Worked examples
- 7.4 Billing records & management
- 7.5 Receipts & batch printing
- 7.6 Late surcharges

8 Violations Register

- 8.1 Overview & demerit points
- 8.2 Standard citation issues
- 8.3 Recording & resolving a citation

PART III — REPORTING & INTELLIGENCE

9 Analytics & Operations Report

- 9.1 Anatomy of the report
- 9.2 Reading each section
- 9.3 Exporting & presenting

10 Logbook (Audit Trail)

- 10.1 Log types
- 10.2 What the system logs by itself
- 10.3 Manual entries, filtering & export

11 Market Assistant (AI)

- 11.1 How the two-tier engine works
- 11.2 What you can ask
- 11.3 Reading an answer

PART IV — ADMINISTRATION

12 Officers & Organizational Board

- 12.1 The board at a glance
- 12.2 Board view & directory view
- 12.3 Adding & editing officers

13 Verification Slips

- 13.1 When a slip is issued
- 13.2 Issuing a slip
- 13.3 Anatomy of a printed slip

14 Settings & Data Management

- 14.1 System information
- 14.2 Export, import & reset

15 Support & Help Center

- 15.1 Backup & restore
- 15.2 Built-in FAQ & contacts

APPENDICES	
A	Business Rules Quick Reference
B	Troubleshooting by Symptom
C	Data Dictionary & ID Prefixes
D	Icon, Badge & Colour Glossary
E	Contacts & Document Sign-off

 **THE FIVE THINGS AN OFFICER DOES MOST**

Collect rent	Tenant Records → tick the month checkbox — \$5.3	Issue a utility bill	Utility Billing → Bill Calculator — \$7.2
Print receipts	Utility Billing → select rows → Print — \$7.5	Approve an applicant	Applicants → Approve → Assign Stall — \$6.3
Issue a verification slip	Stall Management → Verification — \$13.2	Back up the database	Support → Download Full Backup — \$15.1

PART I

Getting Started

What the system is for, where your data lives, and how to move around the application.

CHAPTER 1

Introduction & System Overview

The purpose of the system, the records it keeps, and what you need to run it.

1.1 What the system does

The **Public Market Rental Monitoring System (PMRMS)** is a desktop application built for the **Market Office of the Municipality of Tanauan, Leyte**. It is the single official record of everything that happens in the Tanauan Public Market: which stalls exist, who occupies them, what rent and utilities they owe, what they have paid, which applications are waiting, which citations are open, and who authorised each of those entries.

Every figure the Market Office reports upward — occupancy, collection efficiency, arrears, compliance — is computed by the system from these records. Nothing is re-keyed into a separate spreadsheet, and no total is typed by hand.

 **Fully offline.** The application makes no network requests at all. Fonts, icons, the optional language model and all of your data live on the workstation. It works during a brownout on a laptop battery, and it works with the LAN cable pulled out.

1.2 From ledger book to database

TASK	ON PAPER	IN PMRMS
Finding a tenant	Leaf through the stall ledger by section.	Type any part of the name, stall ID or stallkeeper into the search bar.
Rent discount	Compute 20% by hand and hope the arithmetic holds.	Computed on the tick, stored as a separate discount figure (\$5.4).
Utility bill	Subtract readings, multiply by rate, write the receipt.	Readings in, receipt out — with the previous reading carried forward (\$7.2).
Monthly report	Tally the ledger by hand at month end.	Already compiled; open Analytics and print (Chapter 9).

TASK	ON PAPER	IN PMRMS
Who changed this?	Often unanswerable.	Every change writes a timestamped logbook entry (Chapter 10).

1.3 Module map

The system is one application with ten navigable modules plus two utility screens. They are not independent programs — a record created in one appears immediately in the others. Figure 1.1 traces the path a single stallholder takes through the system, from the day they file an application to the month-end report their payments land in.

Figure 1.1 — Life of a record. Nothing in the lower bands can exist without the band above it: rent is collected against a tenant, a tenant exists because a stall was assigned, and a stall was assigned because an application was approved. This is why the system refuses some deletions — see §4.6.

1.4 How your data is stored

All records are held in a single local data store on the workstation, written automatically every time you make a change. There is no server to connect to, no login queue, and no synchronisation step to remember.

Figure 1.2 — Where the data lives. Because the store is local, a lost or reimaged workstation loses the market's records unless a backup exists. Downloading a weekly backup (§15.1) is the single most important routine task in this manual.

1.5 Key features at a glance

Dashboard Live occupancy, earnings, collection progress and the last 50 actions.	Stalls Register of all 235 stalls with status, permit and inspection tracking.	Tenants Lease terms, stallkeepers, meters and the monthly rent ledger.	Applicants Intake through document checks to approval and stall assignment.
--	--	--	---

⚡ Utility Billing

Meter-based electricity and water billing with batch receipts.

📑 Violations

Citations, demerit points, resolution and repeat-offender ranking.

📊 Analytics

Seven-section executive report for the Mayor and Market Board.

📖 Logbook

Automatic, timestamped audit trail of every recorded action.

🗨 Assistant

Ask in plain language; figures come from the records, not from a model.

👤 Officers

Organisational board and directory of market officials.

✅ Verification

Numbered clearance slips for BPLO permit issuance and renewal.

🔄 Backup

One-click export and restore of the entire database as a file.

| 1.6 System requirements

REQUIREMENT	SPECIFICATION
Operating system	Windows 10 or later, 64-bit
Memory	4 GB minimum; 8 GB if the AI assistant model is installed
Disk space	~400 MB for the application; data grows a few MB per year
Display	1280 × 720 minimum; 1920 × 1080 recommended
Printer	Any A4-capable printer, portrait orientation
Internet	Not required at any point

📁 WHERE THINGS ARE KEPT

Records: `%APPDATA%\Tanauan Public Market System`

Backups you download: your Downloads folder, as `pmrms-backup-YYYY-MM-DD.json`

Optional AI model: `resources/models` beside the application

The system runs happily on the office's existing desktop. It is the *printer* that most often needs attention — set it to A4 portrait once and receipts will line up every time (\$2.6).

| 1.7 Installing and first launch**1 Run the installer**

Launch `TanauanPublicMarketSystem-Setup-1.0.0.exe` and accept the default installation folder. A desktop shortcut and Start Menu entry named **Tanauan Public Market System** are created. A portable build is also available if the workstation forbids installation.

2 Open the application

The Dashboard appears immediately. There is no account to create and no password prompt — access control is the physical security of the office workstation.

3 Confirm the seeded register

The system ships with the market's **2026 occupancy survey** already loaded: 235 stalls across four sections. Open **Stall Management** and confirm the count matches the office's own sheet before you begin entering new records.

4 Set your printer

Print any list once and set the printer to **A4, Portrait, default margins, scaling off**. Windows remembers this for later print jobs.

5 Take a first backup

Go to **Support** → **Download Full Backup**. Keep this untouched file as your known-good starting point.

CHAPTER 2
Interface & Navigation

Learn these six regions once and every module in Part II reads the same way.

2.1 Application layout

Every screen in the system uses the same two-column frame: a fixed **sidebar** on the left that never changes, and a **content area** on the right that swaps as you navigate. A sticky **top bar** runs across the content area and stays visible while you scroll a long table.

1 · Branding	Municipal seal, application name, "Market Office".	4 · Context search	Placeholder changes per module; global on Dashboard.
2 · Navigation	Ten modules; the active one wears the gold pill.	5 · Status cluster	PHT clock, notification bell, admin avatar.
3 · Utility actions	Settings, Support and Log Out.	6 · Content area	Stat cards, tables and charts for the open module.

Figure 2.1 — The application frame. Regions 1–3 are fixed for the life of the session; regions 4–6 re-render as you switch modules. The frame is 240 px of sidebar and a 64 px top bar at the application's native scale.

2.2 Sidebar navigation

The sidebar carries the deep royal-blue-to-violet gradient and is divided into three fixed sections. The module you are currently in is highlighted with a **warm gold pill** ; every other item sits in translucent white.

MODULE	ICON	WHAT IT IS FOR	GO HERE WHEN YOU NEED TO...
Dashboard		Command centre and global search	see today's standing, or find any record from one box
Stall Management		Register of physical stalls	change a stall's status, record an inspection, issue a slip
Tenant Records		Stallholders and the rent ledger	collect rent, edit lease terms, add a stallkeeper
Applicants		Application pipeline	tick requirements, approve, assign a vacant stall
Utility Billing		Electricity and water billing	enter meter readings, print or batch-print receipts

MODULE	ICON	WHAT IT IS FOR	GO HERE WHEN YOU NEED TO...
Violations		Citation register	record an offence, resolve a case, check repeat offenders
Analytics		Executive operations report	prepare the report for the Mayor or the Market Board
Logbook		Audit trail and daily ledger	prove what was done, when, and log an inspection by hand
Officers		Organisational board	appoint, transfer or retire a market official
Assistant		Offline querying assistant	ask a question instead of building a filter

Settings

System information, record counts, export, import and reset to defaults (Chapter 14).

Support

Full backup and restore, the built-in FAQ and developer contacts (Chapter 15).

Log Out

Opens a confirmation dialog. Records are already saved, so nothing is lost.

2.3 Top bar & search

The top bar contains the following elements:

- Search bar:** Search stalls by ID, tenant, section... (Context search — global on the Dashboard)
- + New Log Entry:** Quick action — varies by module
- 02:47:11 PM PHT:** PHT clock — ticks every second (Wednesday, 26 August 2026)
- Alerts:** red dot = action waiting
- AD:** Administrator — signed-in officer

Figure 2.2 — Top bar anatomy. The clock is Philippine Standard Time and is the timestamp used on every logbook entry, receipt and verification slip issued from this workstation.

2.4 Notifications panel

The bell carries a red dot whenever something needs an officer's attention. Notifications are not stored messages — they are recomputed from live records each time you open the panel, so clearing an underlying problem clears the alert.

ALERT	RAISED WHEN	CLEAR IT BY
Overdue Rent	A tenant's rent for the current period is past the due day and untick	Collecting the rent in Tenant Records (§5.3)
Unpaid Utilities	An electricity or water bill is unpaid, or past its due date	Marking the bill paid in Utility Billing (§7.4)
Pending Applicants	An application has all six documents and is awaiting review	Approving or rejecting the application (§6.3)
Expiring Leases	A tenant is flagged <i>Expiring Soon</i>	Renewing the lease terms on the tenant record
Maintenance	A stall is currently set to <i>Maintenance</i>	Returning the stall to <i>Available</i> once work is done
Open Violations	A citation is still unresolved	Setting the citation to <i>Resolved</i> (§8.3)

2.5 Patterns you will meet everywhere

Filter bars

Every register has one. Filters combine — a section filter and a status filter narrow together. **Clear Filters** resets all of them at once, and always resets the search box too.

"Blank keeps on-record" edit forms

Edit forms open *empty*, with the stored value shown as grey placeholder text (*"On record: Meat & Poultry"*). Only fields you actually type into are changed — so you can never blank a field by accident.

Record sheets

The eye icon opens a formal, printable record sheet rather than a form. Use it when a tenant or an auditor asks to see the file.

Confirmation dialogs

Anything destructive or hard to reverse asks first, and names the record it is about to change. Read the record name in the dialog, not just the button.

2.6 Printing conventions

Everything the system prints — registers, receipts, verification slips and the operations report — is laid out for **A4 portrait** with the printer's own margins. Configure this once:

PRINTER SETTINGS TO USE

- **Paper size:** A4 · **Orientation:** Portrait
- **Margins:** Default (or None for receipt tiling)
- **Scale:** 100% — turn *Fit to page* off
- **Background graphics:** On, so seals and status colours print

WHAT EACH PRINT JOB PRODUCES

- **Print List** — the *filtered* table as a formal register sheet
- **Print Receipt** — 1, 2 or 4 copies of one utility bill
- Batch print — up to 4 different receipts tiled per sheet (\$7.5)
- Verification slips — 1, 2 or 4 slips per sheet (\$13.2)

 **Print what you filtered.** **Print List** prints exactly the rows on screen. Filter to one section, or to *Overdue* only, and the printed register is already the working list your inspector needs — no manual highlighting.

PART II

Core Modules

The six registers the Market Office works in every day — stalls, tenants, applicants, billing and compliance.

CHAPTER 3

Dashboard

The first screen after launch: where the market stands this morning, in one page.

The Dashboard answers four questions without a single click: *how full is the market*, *how much has been collected*, *what is waiting for an officer*, and *what happened recently*. Everything on it is recomputed from live records each time it is opened — there is no refresh button because there is nothing to refresh.

3.1 Statistics cards

CARD	PRIMARY VALUE	BREAKDOWN SHOWN BENEATH	SHORTCUT
Total Stalls	Every registered stall	Occupied · Available · Temporarily Closed · Closed · Abandoned · Maintenance	—
Occupancy	Occupied ÷ total, as a percentage	Progress bar filled to the same percentage	—
Active Tenants	Tenant records marked Active	How many leases are flagged <i>Expiring Soon</i>	View Tenants
Pending Applicants	Applications awaiting review	How many are still short of documents	Review Now
Unpaid Utilities	Total pesos outstanding	Count of unpaid bills, and how many are overdue	Utilities

3.2 Market earnings panel

This panel is the month's financial standing in six figures. Read them top to bottom — each line explains the one below it.

FIGURE	WHAT IT MEANS	
Monthly Rent Roll	The contracted rent of every active tenant, added up. The ceiling for the month.	Why collected never equals the roll. Roll – outstanding – discounts = collected. If the three do not reconcile on the printed report, a tenant was almost certainly ticked for the wrong month — check the Rent Month picker (§5.3).
Rent Outstanding	What is still uncollected for the current period.	
Early-Payment Discounts	The 20% given away for on-time settlement — this is why collected sits below the roll.	The collection meter turns red as soon as any utility bill is overdue, even if rent collection is running well. Red means “something is past due”, not “collection is behind”.
Rent Collected to Date	Actually received this month, net of discounts.	
Utilities Collected	Electricity and water payments received.	
Total Market Earnings	Rent collected plus utilities collected.	

3.3 Stall occupancy chart

A stacked bar chart breaks the register down by **market section** and colours each bar by stall status. Figure 3.2 reproduces it from the seeded 2026 survey, which is what you will see before any new records are entered.

3.4 Recent activity & global search

Recent activity feed

The last **50** system operations, newest first. Each row carries a colour-coded action icon, a plain-language description ("Rent collected from Maria Santos for Stall MS-01") and a relative timestamp ("Just now", "5 minutes ago"). The full history lives in the Logbook (Chapter 10) — this feed is only the recent tail of it.

Global search

Typing in the search bar *while on the Dashboard* searches everything at once and returns up to **24** results across **Tenants · Stalls · Applicants · Utility Bills · Violations · Officers**. Results are grouped by type, and clicking one jumps straight to that record in its own module. On any other module the same box filters only that module's table.

When you do not know where a record lives, go to the Dashboard first and search from there. A stallkeeper's name, a meter number and a bill ID all resolve from the same box.

CHAPTER 4

Stall Management

The register of physical stalls — the foundation every tenant and bill hangs from.

A stall is a physical space in the market. It exists whether or not anyone occupies it, and it keeps its identity when tenants come and go. Tenants, bills and verification slips all point back to a stall, which is why this register is maintained first.

4.1 How stalls are identified

FV-07

Section prefix

two letters

Sequence

never reused

Leave **Stall ID** blank and the next free number is assigned.

PREFIXES IN THE 2026 REGISTER

MS	Meat & Poultry — main stalls	46
CS	Meat & Poultry — chicken stalls	22
FS	Fish & Seafood	63
FV	Vegetables & Fruits	89
KK	Dry Goods	15

Figure 4.1 — Reading a stall ID. Two prefixes (MS and CS) both belong to Meat & Poultry, a legacy of the paper register. Sequence numbers are issued by a monotonic counter and are never reused, even after a stall is deleted — see Appendix A.

4.2 Stall statuses & lifecycle

A stall carries exactly one of six statuses. Four of them (*Occupied*, *Temporarily Closed*, *Closed*, *Abandoned*) mean the space is **held** and is not offered to applicants; only *Available* puts a stall back on the vacancy list.

```
graph LR; NewStall([New stall]) --> Available[Available<br/>offered to applicants]; Available -- "tenant assigned" --> Occupied[Occupied<br/>tenant on record]; Occupied -- "released → vacant" --> Available; Available <--> |"under repair ⇌ repaired"| Maintenance[Maintenance<br/>under repair]; Occupied -- "stops trading" --> TemporarilyClosed[Temporarily Closed<br/>held, not trading]; Occupied -- "shut by order" --> Closed[Closed<br/>shut by the office]; Occupied -- "walked away" --> Abandoned[Abandoned<br/>occupant gone, space held]; TemporarilyClosed <--> |"reopens"| Closed;
```

Any status can be corrected from the Edit Stall form; the arrows show the ordinary route, not the only one.

Figure 4.2 — Stall lifecycle. Only the *released* → *vacant* transition removes the occupant record, and the system always asks before doing it (§4.6). The three states on the right keep the tenant attached, which is why a temporarily closed stall still appears in the rent register.

4.3 Viewing & filtering stalls

The module opens on five summary tiles, a filter bar and the register table.

235

TOTAL STALLS

156

OCCUPIED

24

AVAILABLE

0

MAINTENANCE

47

TEMP. CLOSED

FILTER	OPTIONS	HEADER BUTTON	DOES
Market Section	All · Meat & Poultry · Fish & Seafood · Vegetables & Fruits · Dry Goods	Clear Filters	Resets every filter and the search box
Status	All · Occupied · Available · Maintenance · Temporarily Closed · Closed · Abandoned	Print List	Prints the filtered table as a register sheet
Search	Stall ID, occupant name, or section	Stall / Space Verification	Opens the slip dialog (Chapter 13)
		+ New Stall	Opens the Add Stall form

PMRMS-UM-001 · v1.0 · Controlled — for Market Office use

12 / 35

Register columns

COLUMN	SHOWS
Stall ID	Unique identifier — MS-01, CS-04, FS-22, FV-07, KK-11
Section	One of the four market sections
Tenant Name	The current occupant, or <i>Vacant</i>
Status	Available Occupied Maintenance Temporarily Closed Closed Abandoned
Business Permit	With BP No BP Not Recorded — 141 / 11 / 83 in the seeded register
Last Inspection	Date of the most recent recorded inspection, or — if never inspected
Actions	View details Issue verification slip Delete

i “Not Recorded” is not “No BP”. 83 stalls in the seeded register have never had their permit status entered. Treat these as work to do, not as violations — a stall only earns No BP when an officer has actually checked and found none.

4.4 Adding a new stall

1 Open the form

Click + New Stall in the module header.

2 Enter the stall particulars

- **Stall ID** — type a specific ID, or leave it blank for automatic assignment
- **Section** — Meat & Poultry, Fish & Seafood, Vegetables & Fruits or Dry Goods
- **Tenant Name** — required only if you set the status to *Occupied*
- **Status** — normally *Available* for a newly built stall
- **Business Permit** — With BP, No BP or Not Recorded

3 Save

Click Save. The stall is created, a unique ID assigned if you left the field blank, and a logbook entry written automatically.

4.5 Stall details & editing

The stall record sheet

The eye icon opens a formal, printable sheet showing:

- **Stall particulars** — ID, section, status, permit, last inspection
- **Assigned tenant** — name, contact and barangay
- **Stallkeeper roster** — everyone authorised to trade there
- **Utility summary** — electricity and water meter numbers
- **Billing history** — every utility bill raised against this stall

From here you can issue a verification slip or click

Edit Details.

Editing

The Edit Stall form follows the “**blank keeps on-record**” pattern (§2.5): every field opens empty with the stored value as placeholder text. Fill only what changes.

- **Section, Status, Business Permit**
- **Last Inspection** — pick a date, or press

Inspected Today

Linked stall protection. When a tenant record points at this stall, the tenant name and certain status fields are locked here. Change them in Tenant Records instead, so the two never disagree.

4.6 Releasing & deleting a stall

⚠ Releasing. Setting an occupied stall to *Available* asks for confirmation, then **removes the occupant tenant record** and returns the stall to the vacancy list. Do this only when the lease has genuinely ended — a stall that is merely shut should be *Temporarily Closed* instead.

❗ Deleting is refused for occupied stalls. The system will not delete a stall with an active tenant attached, because the tenant's rent ledger and bills would be orphaned. Release or reassign the tenant first, then delete.

CHAPTER 5

Tenant Records & Rent

The stallholder directory and the monthly rent ledger — the busiest screen in the office.

Tenant Records is the master directory of stallholders. It holds lease terms, contact details, stallkeeper rosters, utility meter numbers, and the month-by-month rent ledger. Rent is collected here, one tick at a time.

5.1 The tenant register

Total	Active	Expiring	₱	%
TENANTS ON RECORD	CURRENT LEASE HOLDERS	LEASES ENDING SOON	MONTHLY RENT ROLL	RENT COLLECTED

FILTER	OPTIONS AND EFFECT
Section	All sections, or one market section
Status	All · Active · Expiring Soon
Rent Status	All · Paid · Unpaid · Overdue — evaluated against the selected Rent Month
Rent Month	Month-year picker. This is the single most important control on the screen — it decides which month your ticks are recorded against.
Search	Tenant name, stall ID, tenant ID or stallkeeper name

5.2 Adding & editing a tenant

Click **+ New Tenant**. Most tenants arrive automatically from an approved application (§6.3) — use this form for records being entered from the paper register.

FIELD	DESCRIPTION	VALIDATION
Name	Full name of the stallholder	Required
Mobile Number	Contact number for collection reminders	11 digits
Barangay	Barangay of residence	—
Stall ID	Autocomplete from stalls that are actually vacant	Required; must be available
Section	Filled in for you from the chosen stall	Automatic
Monthly Rent	Contracted rent in pesos — the basis for the 20% discount	Required; numeric
Status	Active or Expiring Soon	—
Rent Due Day	Day of the month rent falls due	1–28; defaults to 5
Electricity Meter No.	Meter serving this stall; auto-fills the bill calculator	—
Water Meter No.	As above, for water	—
Stallkeepers	Embedded roster editor — see §5.5	—

5.3 Monthly rent collection

Rent is collected directly in the register. Each row shows a checkbox for the selected **Rent Month**, a status badge, and — while the discount is still available — what the tenant would pay if they settled today.

1

Set the Rent Month first
Use the month picker in the filter bar. Past months can be recorded retroactively and future months paid in advance. **Check this before you tick anything.**

2

Tick the tenant’s checkbox
The payment is recorded immediately, stamped with today’s date, and the discount — if it applies — is computed and stored.

3

Confirm the row
The badge turns **Paid**. If the discount applied, a **–PX early** tag appears beside it.

🔍

Undo is just an untick. Recorded the wrong tenant or the wrong month? Clear the checkbox and the payment for that month is reversed. Both the tick and the untick are written to the Logbook.

5.4 The 20% early-payment discount

Every tenant has a **Rent Due Day** (1–28, default the 5th). Settle **on or before** that day and 20% comes off the month’s rent. Settle after it and the full rent is due, and the row shows **Overdue** until it is collected.

📋

THE RULE, EXACTLY

- Due day is configurable per tenant, **1 to 28**, default **5**.
- Paid **on or before** the due day → 20% off. The due day itself still qualifies.
- Collected amount = **Monthly Rent × 0.80**, rounded to centavos.
- The net collected *and* the discount are both stored permanently.
- Before the due day passes, the register shows **₱X if paid today** as an incentive.
- Unpaid rent turns **Overdue** by itself the day after it falls due — nothing has to be run or rolled over.

📅

WORKED EXAMPLE — EARLY SETTLEMENT

Tenant	LOTEYRO, LEEMAR — MS-01
Contracted monthly rent	₱1,500.00
Rent due day	5 August 2026
Date ticked by the collector	3 August 2026
Qualifies (3 ≤ 5)	Yes — 20%
Discount $₱1,500 \times 0.20$	–₱300.00
Collected and receipted	₱1,200.00

5.5 Stallkeepers

A stallkeeper is a person authorised to trade at the stall on the tenant's behalf. Each tenant may have several. They are edited inside the Add/Edit Tenant form, and they are searchable — typing a stallkeeper's name in the register finds the tenant they work for.

FIELD	NOTES
Name	Full name as it should appear on the stall record sheet
Relationship	Self · Spouse · Child · Parent · Sibling · Other Relative · Hired Helper
Contact Number	Mobile number
Barangay	Barangay of residence

5.6 The tenant record sheet

The  icon opens a formal record sheet suitable for printing and for showing to the tenant across the counter:

- **Tenant particulars** — name, tenant ID, phone, barangay, assigned stall
- **Stallkeeper information** — the full authorised roster
- **Utility meters** — electricity and water meter numbers
- **Rent account** — payment date, discount received, days late if overdue
- **Rent ledger** — up to 12 months of payment history
- **Bill history** — every utility bill raised against this tenant

This sheet settles disputes. When a tenant queries a figure, open the record sheet rather than the edit form: it shows the stored discount, the exact date of settlement, and the days late as the system counted them.

CHAPTER 6

Applicant Management

From the day a folder is filed to the day a stall key changes hands.

Applicant Management is the intake end of the market. It tracks each application from filing, through the six documentary requirements, to approval or rejection — and then hands the approved applicant straight to the stall assignment form, which creates the tenant record for you.

6.1 The application pipeline

Total APPLICANTS	Pending AWAITING REVIEW	Incomplete DOCUMENTS MISSING	No BP COMPLIANCE FLAG	Approved THIS MONTH
----------------------------	-----------------------------------	--	---------------------------------	-------------------------------

Status advances by itself as requirements are ticked — no officer sets “Pending Review” by hand.

Figure 6.1 — The application pipeline. The only two decisions an officer makes are ticking a requirement and choosing approve or reject. Everything between those points is the system moving the application along.

Automatic status advancement. When the sixth documentary requirement is ticked, the application moves itself from *Incomplete* to *Pending Review* and appears in the notification bell. Untick one and it drops back.

6.2 Documentary requirements

Six documents are required, in this order. The register’s **Requirements** column shows progress as coloured dots with a running count such as **4/6** ; hovering a dot names the specific document.

#	REQUIREMENT	WHAT THE OFFICE IS CHECKING FOR
1	Business Permit	A valid permit from the Business Permit & Licensing Office
2	Barangay Clearance	Clearance from the applicant’s own barangay
3	Community Tax Certificate (Cedula)	Current year’s cedula
4	Health / Sanitary Permit	Health certificate — indispensable for meat, poultry and fish stalls
5	2×2 ID Photo	A recent photograph for the stall record sheet
6	Signed Contract of Lease	The lease executed with the Market Office

☒ Business Permit
 ☒ Barangay Clearance
 ☒ Cedula
 ☒ Health / Sanitary Permit
 ☒ 2×2 ID Photo
 ☒ Contract of Lease

5 Business permits sync both ways. If an applicant who already holds a stall later submits their Business Permit, the linked stall’s permit badge flips from **No BP** to **With BP** on its own. You never have to remember to update the stall register as well.

6.3 Approval & stall assignment

1 Open the review form

Click the applicant’s row, or the review action button. Here you can correct the applicant’s details and tick or untick each requirement as documents are presented.

2 Approve

With the requirements satisfied, click **Approve**. The **Assign Stall** form opens immediately — approval and assignment are one continuous action.

3 Assign a stall

The form lists only **genuinely vacant** stalls. If the applicant named a preferred stall and it is still free, it is pre-selected for you. Set:

- **Stall** — from the vacancy list
- **Monthly Rent** — the contracted amount for this stall
- **Section** — filled in from the stall

The applicant's name and mobile number carry over automatically.

4 Confirm

Click **Assign & Create Tenant**. In one step the system creates the tenant record, marks the stall *Occupied*, links the applicant record to the new tenant, and writes the logbook entry.

 **Approving without assigning.** Click **Skip for now** to approve an applicant while no suitable stall is free. The approval stands and the stall can be assigned later from the same record.

 **Check the rent before confirming.** The **Monthly Rent** you enter here becomes the basis for every future rent collection and every 20% discount. Correcting it later does not restate months already collected.

CHAPTER 7 Utility Billing

Meter readings in, receipts out — for electricity and water across every stall.

Utility Billing is the meter-reading and billing engine. It computes consumption from two readings, applies the municipal rate, issues a numbered bill, and prints the receipt — one at a time, or four to a sheet for a whole section.

7.1 Rates & the billing formula

UTILITY	RATE	UNIT	LATE SURCHARGE
 Electricity	₱11.50	per kWh	3.35%
 Water	₱25.00	per cu.m	10.00%

THE FORMULA

Consumption = Current Reading – Previous Reading (*never below zero*)

Amount Due = Consumption × Rate per Unit

Total if late = Amount Due × (1 + surcharge rate)

Figure 7.1 — How a bill is computed. Surcharge is never written into the bill record. It is recalculated whenever the receipt is printed, so a receipt always shows what is owed *today* while the ledger keeps what was originally billed.

7.2 Issuing a bill, step by step

1 Choose the utility

Toggle **Electricity** or **Water**. The rate, the unit label (kWh or cu.m) and the icon all change with it.

2 Choose the stall or the tenant

Pick a stall and the occupant, last recorded reading and meter number fill themselves in. Picking a tenant instead selects their stall.

3 Set the period covered

Enter **Period From** and **Period To**, or press **Cover all of [Month]** to snap to the first and last day of the current month.

4 Set the due date

Defaults to **15 days after** the period end. Adjust it if the office is billing on a different cycle.

5 Enter the readings

Previous Reading is carried forward from the last bill on record. Type the **Current Reading**. The system rejects negative readings and warns if the current reading is below the previous one.

6 Check the live summary

A summary card shows stall, tenant, meter number, period, both readings, consumption, rate and amount due — and warns you with the computed surcharge if the due date has already passed.

7 Save or print

- **Save to Records** — posts the bill, writes the logbook entry, and records the meter number against the stall if it was not already stored
- **Print Receipt** — opens the print preview straight away
- **Clear** — empties the calculator without saving

Duplicate detection. If a bill already exists for the same stall, utility and billing period, the system stops and asks whether you meant to issue a second one. This catches the most common billing error — the same section read twice in a month.

7.3 Worked examples

ELECTRICITY — PAID ON TIME

Stall / meter	FV-07 · EM-4412
Period covered	1-31 August 2026
Previous reading	1,162 kWh
Current reading	1,248 kWh
Consumption	86 kWh
Rate	₱11.50 / kWh
Due date	15 September 2026
Amount due	₱989.00

WATER — PRINTED AFTER THE DUE DATE

Stall / meter	FS-22 · WM-0188
Period covered	1-31 July 2026
Previous / current	318 → 336 cu.m
Consumption	18 cu.m
Rate	₱25.00 / cu.m
Amount billed (ledger)	₱450.00
Late surcharge 10.00%	+₱45.00
Payable on the receipt	₱495.00

7.4 Billing records & management

Below the calculator sits the register of every bill ever issued, filtered by **Utility Type** (Electricity / Water), **Status** (Unpaid / Paid / Overdue) and a free-text **Search** across bill ID, stall number, tenant name and meter number.

COLUMN	SHOWS
Select	Checkbox for batch printing. The header checkbox selects every visible row.

COLUMN	SHOWS
Bill ID	Sequential identifier, e.g. UTL-001 — never reused
Utility / Stall / Meter	What was billed, where, and off which meter
Tenant	Who was billed
Period	The billing period covered
Consumption	kWh or cu.m computed from the readings
Amount	The billed figure — never altered by surcharge
Status	Paid Unpaid Overdue — overdue is derived from the due date, not set by hand
Actions	View Mark paid / unpaid Print Delete

Use **Export CSV** to take the filtered register into a spreadsheet. The export carries the full detail — both readings, the rate, the surcharge percentage, the surcharge as of today and the total payable today — not just what is on screen.

7.5 Receipts & batch printing

Printing one bill

The icon opens the print preview:

- **Copies:** 1, 2 (*Tenant's Copy* + *Market Office Copy*) or 4 (adding *Treasurer's Copy* + *File Copy*)
- **Zoom:** slider from 35% to 200%, plus **Fit** and **Actual Size (100%)**
- **Fullscreen:** for checking small print — press **Esc** to leave

"Printed by"

The issuing officer's name is remembered from the last print, so it is typed once a shift rather than once a bill.

Batch printing a section

- 1

Select the bills
Tick individual rows, or use the header checkbox to take every row currently visible after filtering.
- 2

Read the batch bar
A floating bar reports "*X bills selected · Y A4 sheets, 4 receipts to a sheet*".
- 3

Print
Click **Print X Receipts**. Four *different* stalls' receipts are tiled 2×2 per sheet with dotted cut guides.

ONE RECEIPT

Republic of the Philippines

Municipality of Tanauan, Leyte

ELECTRICITY BILL — UTL-014

Stall FV-07 · Vegetables & Fruits

Tenant: SANTOS, MARIA

Meter EM-4412 · Period 1-31 Aug 2026

Previous 1,162 → Current 1,248

86 kWh × ₱11.50

AMOUNT DUE

₱989.00

Due 15 Sep 2026 · surcharge shown here if past due

Printed by: _____ Tenant's Copy

BATCH SHEET — A4, FOUR TO A SHEET

FV-07

₱989.00

FV-08

₱746.50

FS-22

₱450.00

KK-03

₱213.75

dotted lines are cut guides

COPIES

1 · Tenant's Copy

2 · Market Office Copy

3 · Treasurer's Copy

4 · File Copy

Choosing 2 copies prints 1 and 2;

choosing 4 prints all of them.

A batch prints four **different**

stalls, not four copies of one.

Figure 7.2 — Receipt anatomy, batch sheet and copy set. Each receipt carries the municipal seal, the stall and tenant particulars, both meter readings, the consumption arithmetic, the amount due, the due date, any surcharge, and the name of the officer who printed it.

7.6 Late surcharges

SURCHARGE RULES

- **Electricity:** 3.35% of the billed amount, once the due date has passed.
- **Water:** 10.00% of the billed amount, once the due date has passed.
- Surcharge is computed **dynamically, at print time**. It appears on the receipt only if the bill is past due on the day you print.
- The stored ledger amount is **never** changed. Historic records stay exactly as billed, while the receipt in the tenant's hand shows what is owed today.
- A bill turns **Overdue** by itself the day after its due date — no month-end process is run.

 **Why the two figures differ.** Officers sometimes ask why the register shows ₱450.00 while the receipt says ₱495.00. The register is the *bill*; the receipt is the *demand as of today*. Both are correct, and Appendix A records the rule.

CHAPTER 8

Violations Register

Citations, demerit points and the record of who keeps offending.

The Violations Register records offences committed by tenants and by non-tenants trading in the market, assigns demerit points as a measure of severity, and tracks each case through to resolution.

8.1 Overview & demerit points

Total	Open	Resolved	Points
CITATIONS RECORDED	STILL UNRESOLVED	CASES CLOSED	OPEN DEMERITS

A dedicated **Repeat Offenders** panel ranks tenants by their total *unresolved* demerit points. Points from resolved citations drop out of the ranking, so the list is always a picture of live compliance risk rather than a permanent black mark.

8.2 Standard citation issues

Eight standard issues are offered from a dropdown; any other wording can be typed in free text when the standard list does not fit.

#	VIOLATION ISSUE	#	VIOLATION ISSUE
1	Late document submission	5	Operating beyond stall boundary
2	Improper stall cleanup	6	Unauthorized subleasing
3	Health code violation	7	Fire safety non-compliance
4	Unpaid rent or utilities	8	Obstruction of walkway

8.3 Recording & resolving a citation

- 1 Click **+ Record Violation**
Opens the citation form.

- 2 Fill in the citation
- **Party Cited** — pick from the tenant list, or type any name for a non-tenant
 - **Demerit Points** — the severity, as a number
 - **Violation Issue** — one of the eight standard issues, or your own wording
 - **Status** — Open, or Resolved if it was settled on the spot
 - **Date Recorded / Date Resolved**
 - **Officer Notes** — free text; this is where the account of what happened belongs

- 3 Save
- The citation is recorded and a logbook entry written.

✓ Resolving

Open **Edit Violation** and set the status to **Resolved**. The resolution date is stamped for you. Reopening a case clears that date again. Demerit points and notes can be amended at any time.

≡ Sorting & export

The register lists open cases first, then newest recorded date. **Export CSV** downloads every citation; **Print List** prints the filtered table for the inspector's rounds.

🗉 **Write the notes as if for a hearing.** Officer Notes are the only free-text account of the offence. Record what was seen, when, and who was present — the badge and the points will not carry a case on their own.

PART III

Reporting & Intelligence

Turning the day's records into the report the Mayor reads and the trail an auditor follows.

 CHAPTER 9

Analytics & Operations Report

A formal seven-section report for the Municipal Mayor and the Market Board.

The Analytics module compiles a complete **executive operations report** from live records. It is not a dashboard with charts bolted on — it is a document, laid out for printing, with a masthead, a reference number and seven numbered sections in the order a board expects to read them.

 REPORT MASTHEAD

Seal	The Tanauan municipal seal, top left	Reference	PMRMS-AR-YYYYMMDD , generated from the date
Title	Public Market Operations Report	Timestamp	Date and time of generation, Philippine Standard Time

9.1 Anatomy of the report

9.2 Reading each section

I • Executive Summary

Five headline cards, each with a progress meter: **Stall Occupancy Rate**, **Active Tenancies**, **Applications Pending**, **Collection Efficiency Rate**, and **Open Violations & Demerit Points**. If the board reads one page, this is it.

II • Stall Utilization

The same stacked chart as Figure 3.2, backed by a table giving exact counts per status with proportion bars. Use this to justify a request for stall rehabilitation.

III • Applicant Processing

Shows where applications are getting stuck. A large *Incomplete* share is a documentation problem; a large *Pending Review* share is an officer-time problem.

IV • Tenancy & Rental Coverage

Section-by-section occupancy and monthly rent roll. This is the section that shows which part of the market is carrying the revenue.

V • Utility Billing & Collection

Electricity and water consumption, amounts billed, amounts collected and the outstanding balance. Collection efficiency in section I is derived from these figures.

VI–VII • Compliance & Activity

Recent citations with their status, then a breakdown of logbook entries by type — evidence that inspections and collections are actually being recorded, not just performed.

9.3 Exporting & presenting

Export Report downloads a complete JSON file (`civic-market-core-report.json`) holding every figure behind the report. Use it to archive the month, to hand data to another office, or to build a chart the report does not include.

To present the report, print it directly (§2.6). Because it is laid out as a document, the printed output needs no reformatting.

The report is always live. There is no “generate” step and no stored version. Opening Analytics recompiles it from current records, so the reference number is the date you opened it — print or export on the day the board meets.

Because it is live, a report printed before month-end collection differs from one printed after. Note the timestamp in the masthead when you file a copy.

CHAPTER 10

Logbook (Audit Trail)

The record of what was done, by which module, and when — written mostly without you.

The Logbook is both the daily activity ledger and the audit trail. Officers write inspections, incidents and announcements into it by hand; the system writes everything else into it automatically.

10.1 Log types

TYPE	COLOUR	USED FOR	TYPICAL SOURCE
Inspection	Blue	Stall inspections and permit checks	Mostly entered by hand by the Market Inspector
Incident	Red	Security incidents, complaints, disturbances	Entered by hand
Maintenance	Amber	Repairs, cleaning, facility works	Entered by hand, or written when a stall moves to <i>Maintenance</i>
Collection	Green	Rent and utility collections	Written automatically on every rent tick and bill payment
Announcement	Gray	Public notices, schedule changes, advisories	Entered by hand

10.2 What the system logs by itself

Every record-changing action writes a structured, timestamped entry. You never have to remember to log these:

- Adding, editing or deleting a stall
- Creating, editing or releasing a tenant
- Ticking or unticking a month's rent
- Approving or rejecting an applicant
- Assigning a stall to an approved applicant
- Issuing, editing, paying or deleting a utility bill
- Recording, amending or resolving a violation
- Appointing, transferring or removing an officer
- Issuing a stall / space verification slip
- Importing, exporting or resetting the database

Rent entries name the figures. A collection entry records the tenant, the stall, the month, the amount collected and — where it applied — the 20% discount and the date it was settled on. That single line is usually enough to answer a query without opening the tenant record.

10.3 Manual entries, filtering & export

+ Adding an entry by hand

1

Click **+ New Entry**

Available in the Logbook, and as a quick action on the Dashboard top bar.

2

Choose type and write the detail

Pick Inspection, Incident, Maintenance, Collection or Announcement, then describe what happened.

3

Save

Stamped with the current Philippine Standard Time and added to the ledger.

▼ Finding and exporting

- **Date filter** — entries recorded on a chosen date
- **Type filter** — one of the five log types
- **Search** — matches both the detail text and the type
- **Export Log** — all entries as CSV
- **Print List** — the filtered entries as a register sheet

Deleting a log entry breaks the trail. The system warns you because the Logbook is the office's audit record. Delete only a genuine mis-entry, and record why in a replacement entry.

CHAPTER 11

Market Assistant

Ask a question in plain language. The figures still come from the records.

The Market Assistant lets an officer ask about rent, stalls, bills, tenants and violations without building a filter. It runs entirely on the workstation — there is no online service behind it.

11.1 How the two-tier engine works

Figure 11.1 — The verification gate. The model never supplies a number. It may only re-word an answer the database already computed, and its wording is thrown away if any figure or name in it fails to match the computed facts.

Data accuracy guarantee. Amounts, counts and names are always produced by the system's own business logic — never generated by a language model. If the model's phrasing disagrees with the computed facts on any figure, the phrasing is discarded and the verified record text is shown instead.

11.2 What you can ask

INTENT	ASK IT LIKE THIS	ANSWERS WITH
Overdue rent	"Who has overdue rent?" · "List overdue tenants"	Named tenants, stalls and days late
Unpaid rent	"Who hasn't paid rent this month?"	Uncollected tenants for the current period
Collected rent	"How much rent has been collected?"	Total collected, net of discounts
Tenant payment	"Has Maria Santos paid her rent?"	That tenant's standing for the period
Total earnings	"What are total market earnings?"	Rent plus utilities collected
Vacant stalls	"Which stalls are available?"	Genuinely vacant stalls by section
Stall status	"What's the occupancy breakdown?"	Counts per status across the register
Unpaid utilities	"Are there unpaid electricity bills?"	Outstanding bills and their total
Meter lookup	"What's the meter number for Stall MS-01?"	Electricity and water meter numbers
Tenant lookup	"Show me details for Juan Dela Cruz"	The tenant's particulars and standing
Pending applicants	"How many pending applications?"	Count and who is waiting
Open violations	"Any open violations?"	Unresolved citations and demerit points

11.3 Reading an answer

Source badges

Every answer states where its wording came from:

Working with the assistant

- Suggestion chips** — one tap for the questions asked most often

- **From the records** — computed directly from the database
- **Worded by model · figures verified** — the model phrased it, and every figure passed the check
- **Model wording discarded** — the phrasing failed the check; you are seeing the raw record text

All three are equally trustworthy on the numbers. The badge tells you about the *prose*, not the data.

- **Composer bar** — type any question in natural language
- **Navigation buttons** — answers offer **Open Tenants** , **Open Billing** and similar, so you can act on what you just read
- **Model status** — the header badge shows  a model is active, or  records-only mode

 Records-only mode is not a degraded mode. Every one of the twelve intents above is answered identically without a model.

PART IV

Administration

The officer board, official clearance slips, and looking after the database itself.

CHAPTER 12

Officers & Organizational Board

Who holds which seat, who they report to, and how to keep the tree valid.

The Officers module holds the organisational hierarchy of the market's officials — the Mayor at the head, the Market Board and the Market Office beneath, and the supporting offices that the market depends on. It is both a chart and a contact directory.

12.1 The board at a glance

10 SEATS ON THE BOARD	— OFFICERS IN POST	— ON LEAVE	10 VACANT SEATS	5 OFFICES REPRESENTED	3 LEVELS DEEP
--------------------------	-----------------------	---------------	--------------------	--------------------------	------------------

 **The board ships empty on purpose.** All ten seats are seeded as **Vacant** with no name attached. Filling in who actually holds each post is the first administrative task after installation — the seats, their offices and their reporting lines are already correct.

12.2 Board view & directory view

Organizational Board view

An interactive tree with branching connector lines. Each node shows an avatar with a colour gradient, the name and position title, the office, a status tag (**Active** **On Leave** **Vacant**) and a quick edit button.

Directory view

The same people as a table: Officer (name and position), Office, Reports To, Contact, Date Appointed, Status and Actions. Includes an Office filter and pagination — better when you are looking for a phone number rather than a reporting line.

12.3 Adding & editing officers

Click **+ Add Officer** , or the quick edit button on any node.

FIELD	NOTES
Position	The job title, e.g. Market Inspector — this is the seat, not the person
Office	Choose an existing office or type a new one
Held By	Name of the person occupying the seat; leave blank for a vacancy
Status	Active · On Leave · Vacant
Reports To	Chosen from an indented tree dropdown, so the hierarchy is visible while you pick
Date Appointed	Date the current holder took the post
Mobile Number / Email	Contact details shown in the directory view

 **Hierarchy safety.** The system will not let you create a circular reporting line, make an officer report to themselves, or orphan a seat. When an officer is deleted, everyone reporting to them is reassigned automatically to that officer's own superior, so the tree stays valid.

CHAPTER 13

Stall / Space Verification Slips

The numbered clearance a stallholder carries to the licensing office.

A verification slip is the Market Office's official statement that a named stallholder is in good standing for a named stall. The stallholder presents it at the **Business Permit & Licensing Office** when obtaining or renewing a business permit.

13.1 When a slip is issued

Renewal — existing lessee

For a stallholder renewing an existing permit. Choosing this purpose pre-ticks the four boxes that errand usually needs: *Latest Business Permit (Original), OR of Last Monthly Rental Paid, OR of Last Electric/Water Bill Paid and Existing Lessee.*

Issuance — new lessee

For a first permit. Pre-ticks *DTI Registration, OR of Last Monthly Rental Paid, Inspection of Stall and New Lessee.*

There are two routes to the dialog: the **Stall / Space Verification** button in the Stall Management header, or the  icon on a specific stall row — which pre-fills the stallholder, section and stall number for you. The **Issue Verification Slip** button on a stall record sheet does the same.

13.2 Issuing a slip

1

Choose the purpose

Renewal or **Issuance**. The purpose prints on the slip and sets the default ticks.

2 Fill in the particulars

- **Issued By** — the Market Supervisor's name; remembered from your last slip, so it is typed once a shift
- **Issued To** — the stallholder, filled in automatically when launched from a stall row
- **Section** and **Stall No.** — filled in from the same source

3 Adjust the checklist

Tick or untick any of the eight items. Anything left unticked **prints as an empty box**, so the counter can tick it by hand when the document is presented. The **Others** field takes free text such as *"until Dec 31, 2026"*.

4 Choose how many slips to run off

You are issuing a short pad, not copies: **each slip on the sheet receives its own control number**. Four slips fit on one A4 sheet.

5 Print

Each slip carries its control number (**SSV-001** , **SSV-002** , ...), the date issued, and a validity of **7 days**.

ONE SLIP

A4 SHEET — FOUR SLIPS, FOUR CONTROL NUMBERS RULES

Figure 13.1 — Slip anatomy, sheet layout and issuing rules. Validity is deliberately short: a stall can fall behind on rent within a month, so a month-old slip would certify nothing. Seven days is long enough for the errand and no longer.

13.3 The eight-item checklist

#	CHECKLIST ITEM	RENEWAL	ISSUANCE	NOTE
1	Latest Business Permit (Original)	pre-ticked	—	The permit being renewed
2	DTI Registration	—	pre-ticked	Business name registration
3	OR of Last Monthly Rental Paid	pre-ticked	pre-ticked	Proof rent is current
4	OR of Last Electric/Water Bill Paid	pre-ticked	—	Proof utilities are current
5	Meat Inspector's Clearance	—	—	Left to the counter — applies to Meat & Poultry only
6	Existing Lessee	pre-ticked	—	Declares the standing of the holder
7	Inspection of Stall	—	pre-ticked	Required before a first permit is signed
8	New Lessee	—	pre-ticked	Declares this is a first issuance

Control number tracking. Every slip receives a sequential control number stored permanently in the system. Numbers are never reused, even if a slip record is deleted — so a slip presented at the BPLO can always be traced back to the day and the officer that issued it.

CHAPTER 14

Settings & Data Management

System information, record counts, and the three operations that move data in and out.

14.1 System information

ITEM	SHOWS
Application Version	v1.0
Storage Type	Local browser storage on this workstation
Total Record Count	Records across every table added together
Last Saved	Timestamp of the most recent automatic save

QUICK STATS CARD

A live count of **Total Stalls · Active Tenants · Pending Applicants · Utility Bills · Open Violations · Unpaid Utilities**. Use it as a sanity check after an import: if the counts are not what you expected, restore the backup you took beforehand.

14.2 Export, import & reset

Figure 14.1 — The three data operations. Import and Reset both replace the whole database — neither merges. The safe sequence is always: export, verify the file downloaded, then act.

Export All Data

Downloads the entire database as a JSON file (`civic-market-core-report.json`) for external analysis, archival, or transfer to another workstation.

Import Data

- 1

Click `Import Data`
A file picker opens.
- 2

Choose a backup file
Select a previously exported JSON file. The system validates the file's schema before going any further.
- 3

Read the import preview
A confirmation modal lists the exact record counts that will be replaced in each table. Compare them against what you expect.
- 4

Confirm
Click `Confirm` . The current data is replaced by the imported records.
- !

Import replaces everything. Importing does not merge records — it substitutes the whole database. Export a backup of the current data first, every time, without exception.

Reset to Defaults

Purges all data and reloads the seeded market register. A danger-styled confirmation dialog appears first. The reset:

- Clears the stored state (`pmrms-state-v9`) and the ID counters (`pmrms-id-counters`)
- Reloads the default 2026 data — 235 stalls, the ten board seats, and nothing else
- **Cannot be undone** unless you hold a prior backup

⚠ Resetting also restarts the ID counters. Bill and slip numbers issued before a reset can therefore be issued again afterwards, which is exactly the situation the monotonic counters exist to prevent. Reset only a workstation being set up fresh, never one holding live records.

CHAPTER 15

Support & Help Center

Backup, restore, the built-in FAQ, and who to call.

 **User Guide**

Quick reference for the operations officers perform most.

 **Contact Support**

Direct links to the development team.

 **System Updates**

Current version information — v1.0.

 **Data Privacy**

Confirms 100% local operation with zero external telemetry.

15.1 Backup & restore

Download Full Backup

Produces a complete database file named `pmrms-backup-YYYY-MM-DD.json` containing every stall, tenant, applicant, bill, violation, officer, logbook entry and verification slip record.

Upload Backup File

Restores the database from a previously downloaded backup. A status alert confirms a successful restoration.

A BACKUP ROUTINE THAT WORKS

- **Every Friday** — download a full backup before closing.
- **Before any import or reset** — always, no exceptions.
- **At month end** — after the last collection, before the report.
- **Keep three** — this week's, last week's and last month's, on a USB drive kept away from the workstation.

🛡 **The backup is the only copy.** Records live on this workstation alone (Figure 1.2). A failed drive, a reimaged machine or a stolen computer takes the market's register with it unless a backup exists elsewhere.

15.2 Built-in FAQ & contacts

The Support page carries an accordion FAQ with eleven operational guides. Each corresponds to a section of this manual:

#	FAQ TOPIC	IN THIS MANUAL
1	How to add a new stall to the market	\$4.4
2	How to review an applicant and check requirements	\$6.2 – \$6.3
3	How electricity meter computation works	\$7.1, \$7.3
4	How water meter computation works	\$7.1, \$7.3
5	How late surcharges are applied	\$7.6
6	How to record and resolve a violation citation	\$8.3

#	FAQ TOPIC	IN THIS MANUAL
7	How to export reports and analytics data	\$9.3
8	How to transfer data between workstations	\$14.2, \$15.1
9	How to issue a verification slip	\$13.2
10	How to manage the organizational board	\$12.3
11	How to back up and restore system data	\$15.1

APPENDICES

Reference

The rules, the fixes, the vocabulary and the contacts — everything you look up rather than read.

APPENDIX A

Business Rules Quick Reference

Every figure and rule the system enforces, on one spread.

⚡ Electricity

₱11.50 per kWh
Late surcharge **3.35%**
Due 15 days after period end

💧 Water

₱25.00 per cu.m
Late surcharge **10.00%**
Due 15 days after period end

🏠 Early rent discount

20% off the monthly rent
Due day **1–28**, default **5**
Paid on the due day still qualifies

RULE	HOW IT BEHAVES, AND WHY
Monotonic ID counters	Every identifier — STL , TEN , APP , UTL , VIO , OFC , SSV , LOG — is assigned in sequence and never reused , even after a record is deleted. A number that appears on a printed receipt or slip can therefore only ever refer to one thing.
20% early rent discount	Settling on or before the tenant's due day takes 20% off. Net collected and the discount value are stored <i>separately</i> and permanently, so the report can show what was given away as well as what came in. The test is the date the box is ticked — recording an old month today never qualifies.
Rent turns overdue by itself	Unpaid rent becomes Overdue the day after it falls due. Nothing is run, clicked or rolled over. Days late are counted from the due day.
Dynamic late surcharges	Electricity 3.35%, Water 10%. Calculated at print time when the due date has passed. The stored ledger amount is never altered, so the register keeps the amount billed while the receipt shows the amount owed today.
Consumption floor	Consumption is never negative. If the current reading is below the previous one — a replaced meter, a misread — the system warns and floors the consumption at zero rather than crediting the tenant.
Duplicate bill detection	A second bill for the same stall, utility and period triggers a confirmation before it is posted.
Stall–tenant linking	A tenant record locks the linked stall's name and status fields. Assigning a tenant marks the stall <i>Occupied</i> ; releasing a stall to <i>Available</i> removes the occupant record.
Held statuses	<i>Occupied</i> , <i>Temporarily Closed</i> , <i>Closed</i> and <i>Abandoned</i> all mean the space is spoken for and is not offered to applicants. Only <i>Available</i> puts a stall back on the vacancy list.
Occupied stalls cannot be deleted	Refused outright, so a tenant's rent ledger and bills are never orphaned. Release or reassign first.
Automatic application advancement	Ticking the sixth documentary requirement moves an application from <i>Incomplete</i> to <i>Pending Review</i> on its own; unticking one moves it back.
Business permit sync	An applicant who already holds a stall and later submits a Business Permit flips that stall's badge from No BP to With BP automatically.
Verification slip validity	7 days from issue. Four slips to an A4 sheet, each with its own control number — printing four issues four distinct slips, not four copies of one.

RULE	HOW IT BEHAVES, AND WHY
Receipt copy set	1, 2 or 4 copies: <i>Tenant's Copy</i> , <i>Market Office Copy</i> , <i>Treasurer's Copy</i> , <i>File Copy</i> , always in that order. Batch printing tiles 4 <i>different</i> receipts per sheet.
Hierarchy safety	Circular reporting lines, self-references and orphaned seats are prevented. Deleting an officer reassigns their subordinates to that officer's superior.
Philippine Standard Time	Every date the system reasons about is Asia/Manila, whatever the computer's own clock is set to. A machine back from repair on the wrong timezone cannot change whose rent is overdue.
Complete audit trail	Every record-changing action writes a timestamped logbook entry, including the figures involved.
AI never supplies figures	All amounts, counts and names come from deterministic business logic. Model phrasing that disagrees with the computed facts is discarded automatically.
Zero network access	The system makes no network requests. Fonts, icons, data and the optional model are all local. Internet is never required.

APPENDIX B

Troubleshooting by Symptom

Find the sentence that matches what you are seeing.

SYMPTOM	WHAT TO DO
The application will not start	Confirm Windows 10 or later, 64-bit. Right-click the shortcut and choose <i>Run as administrator</i> . If it still fails, reinstall — your data lives outside the application folder and survives a reinstall.
Data appears missing after reopening	Records are stored under <code>%APPDATA%\Tanauan Public Market System</code> . If that profile was cleared or the machine reimaged, restore from a backup via Support → Upload Backup File .
Cannot delete a stall	The stall is occupied. Release or reassign the tenant in Tenant Records first (§4.6), then delete.
Rent discount was not applied	The 20% applies only when the box is ticked on or before the tenant's due day. Check Rent Due Day on the tenant record, and remember that recording a past month today never qualifies (§5.4).
Receipt total differs from the register	Expected. The register shows the amount billed; the receipt adds the late surcharge as of today (§7.6). Both are correct.
A tenant is missing from the rent list	Check the Rent Status and Rent Month filters — a tenant already marked paid disappears from an <i>Unpaid</i> filter. Press Clear Filters .
Rent was recorded against the wrong month	Set the Rent Month picker back to the wrong month, untick the box to reverse it, set the correct month, then tick again (§5.3).
Print output is misaligned	Set the printer to A4, Portrait, margins <i>Default</i> or <i>None</i> , and turn <i>Scale to fit</i> off. Enable background graphics so seals and status colours print (§2.6).
Search returns no results	Active filters limit the search. Clear filters first. From the Dashboard the same box searches every record type at once (§3.4).
The system refuses a meter reading	Readings cannot be negative, and the current reading should not be below the previous one. If the meter was genuinely replaced, record the new meter number on the tenant record before billing.
A duplicate bill warning appears	A bill already exists for that stall, utility and period. Cancel and check the register before proceeding — this usually means a section was read twice.
Market Assistant shows "Records only"	No local model is installed. The assistant still answers every supported question from the database. To enable phrasing, place a compatible GGUF model in resources/models (§11.1).
Notification count looks wrong	Counts are computed live, never stored. If a count seems wrong, the underlying record is wrong — check for rent still unticked, or a citation still open (§2.4).

SYMPTOM	WHAT TO DO
Transferring to another computer	Support → Download Full Backup on the old machine, carry the file on a USB drive, then Support → Upload Backup File on the new one (§15.1).
The application is running slowly	Close other applications. If the database has grown very large after several years, export the old period for archival before considering a reset — and read the warning in §14.2 first.
Bill or slip numbers have restarted	The database was reset, which restarts the ID counters. Restore from the backup taken before the reset (§14.2).

APPENDIX C

Data Dictionary & ID Prefixes

What each identifier means and what each record holds.

C.1 Record identifiers

PREFIX	RECORD TYPE	PREFIX	RECORD TYPE
STL	Stall record	VIO	Violation citation
TEN	Tenant record	OFC	Officer / board seat
APP	Applicant record	SSV	Stall / space verification slip
UTL	Utility bill	LOG	Logbook entry

C.2 Stall ID prefixes and the 2026 register

PREFIX	SECTION	STALLS	OCCUPIED	TEMP. CLOSED	AVAILABLE	OTHER
MS / CS	Meat & Poultry	68	33	18	16	1 abandoned
FS	Fish & Seafood	63	49	6	8	—
FV	Vegetables & Fruits	89	61	21	0	7 closed
KK	Dry Goods	15	13	2	0	—
Total		235	156	47	24	8

Business permit standing across the same register: **With BP** 141 · **No BP** 11 · **Not Recorded** 83.

C.3 Terms used in this manual

TERM	MEANING
Stall	A physical trading space. Exists independently of any tenant.
Tenant / stallholder	The person holding the lease on a stall and liable for its rent.
Stallkeeper	A person authorised to trade at the stall on the tenant's behalf.
Applicant	Someone who has filed for a stall but has no tenant record yet.
Rent roll	The contracted monthly rent of all active tenants added together.
Rent Due Day	Day of the month a tenant's rent falls due, 1–28, default 5.
Early-payment discount	20% off, for settling on or before the due day.
Consumption	Current meter reading minus previous, floored at zero.
Late surcharge	A percentage added at print time to a bill past its due date.
Demerit points	Numeric severity attached to a citation; unresolved points rank repeat offenders.
Held status	A stall status meaning the space is spoken for and not offered to applicants.
Control number	The permanent sequential number printed on a verification slip.

TERM	MEANING
Records-only mode	The assistant operating with no language model installed.
PHT	Philippine Standard Time (Asia/Manila) — the clock the system reasons in.

APPENDIX D

Icon, Badge & Colour Glossary

What the colours and symbols on screen are telling you.

D.1 Module icons

dashboard Dashboard	storefront Stall Management	groups Tenant Records	person_add Applicants
bolt Utility Billing	gavel Violations	analytics Analytics	menu_book Logbook
account_tree Officers	forum Market Assistant	settings Settings	help Support

D.2 Action icons

View	opens the record sheet	Edit	opens the edit form	Print	opens the print preview
Verify	issues a verification slip	Mark paid	toggles bill status	Delete	asks first, always
Filter	narrows the register	Alerts	red dot = action waiting	Search	global on the Dashboard

D.3 Status badges

BADGE	WHERE IT APPEARS	MEANS
Paid	Rent register, billing register	Settled and recorded
Unpaid	Rent register, billing register	Owing, but not yet past its due date
Overdue	Rent register, billing register	Past the due date — set by the system, never by hand
Occupied	Stall register	A tenant is on record for this stall
Available	Stall register	Genuinely vacant and offerable to applicants
Temporarily Closed	Stall register	Held by its tenant but not trading
Maintenance	Stall register	Under repair
Closed	Stall register	Shut by order of the office
Abandoned	Stall register	Occupant gone; the space is still held
With BP	Stall register	A business permit has been sighted
No BP	Stall register	Checked, and none held
Not Recorded	Stall register	Never checked — work to do, not a violation
Open	Violations register	Citation unresolved; points count toward the ranking
Resolved	Violations register	Case closed; points drop out of the ranking

BADGE	WHERE IT APPEARS	MEANS
Active	Officers board	Standing of a board seat
On Leave		
Vacant		

D.4 Colour language

Green Settled, available, resolved, verified. Nothing needed from you.	Amber Owing, held, or awaiting something. Attention, but not yet late.	Red Past due, closed by order, or destructive. Act, or read carefully.	Blue & gray Blue is informational and in-progress; gray is unknown or unrecorded.

APPENDIX E

Contacts & Document Sign-off

Who to call, and where this document is controlled.

E.1 Development team

For technical support, defect reports or feature requests:

Jon Jon Albao jonjonalbao65@gmail.com +63 919 845 1397	Kyra Joyce Tondo kyrajocet@gmail.com +63 916 425 8038	Shila Mae Marteja shilamaemarteja18@gmail.com +63 985 452 8964
---	--	---

E.2 Offices referenced in this manual

OFFICE	REFERENCED FOR
Market Office	Day-to-day operation of every module in this manual
Office of the Municipal Mayor	Recipient of the operations report (Chapter 9)
Market Board	Recipient of the operations report; chaired seat on the board
Business Permit & Licensing Office (BPLO)	Business permits; destination of verification slips (Chapter 13)
Municipal Health Office	Sanitary permits and the Sanitary Inspector seat
Municipal Treasurer's Office	Treasurer's copy of receipts; Market Treasurer / Cashier seat

E.3 Sign-off

This manual is issued as a controlled document of the Market Office. Amendments must be recorded in the document control table in the front matter before reissue.
